

SHARP SERVICE MANUAL

S91K9VC-B36B/

VHS VIDEO CASSETTE RECORDER

MODEL **VC-B36B**

In the interests of user-safety (Required by safety regulations in some countries) the set should be restored to its original condition and only parts identical to those specified should be used.

SPECIFICATIONS

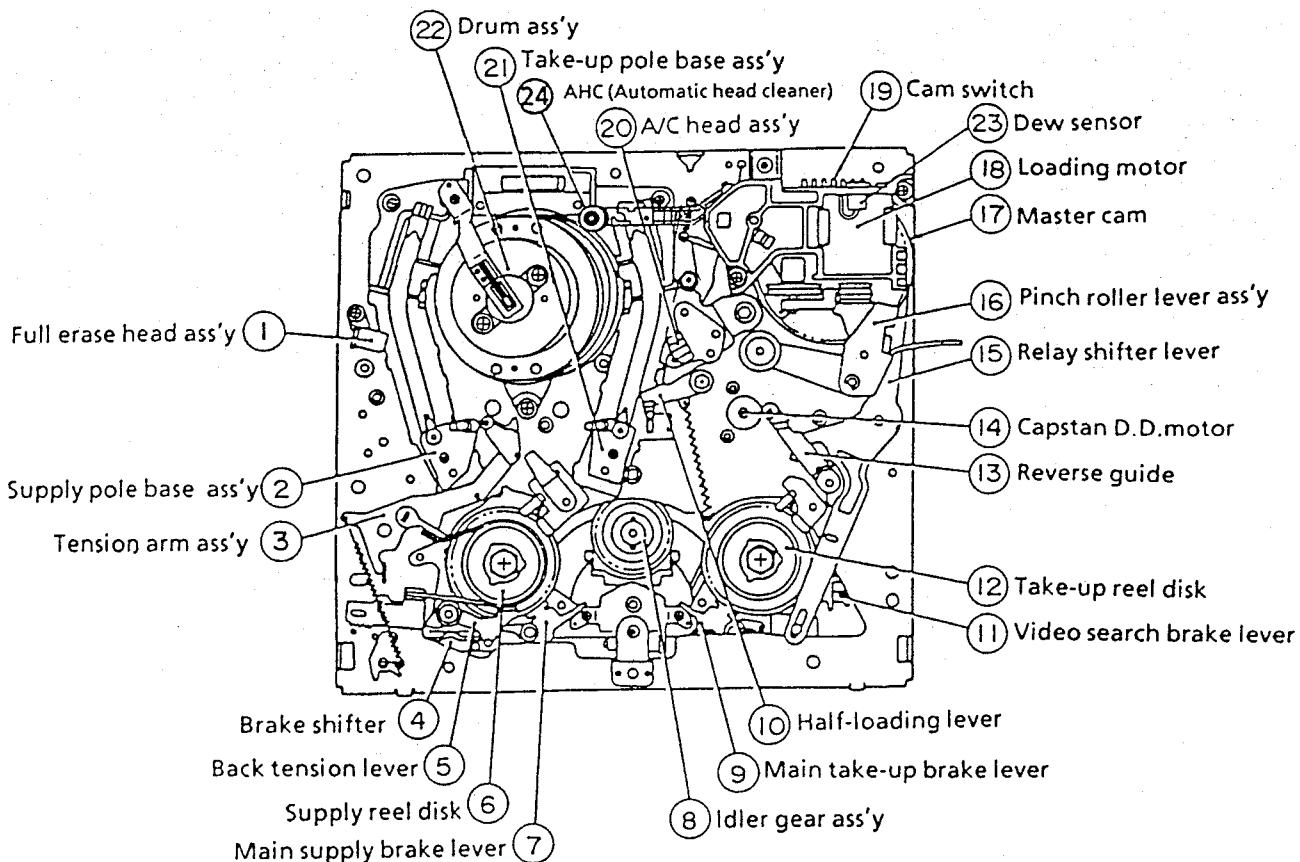

Format:	VHS PAL standard
Video recording system:	Two rotary head helical scan system
Video signal:	PAL/SECAM colour and B/G, D/K signals, 625 lines
Recording playing time:	240min max. with SHARP E - 240 tape (PAL/MESECAM) 160min max. with SHARP T-160 tape (NTSC playback)
Tape width:	12.7 mm
Tape speed:	23.39 mm/sec. (PAL/MESECAM) 33.35 mm/sec. (NTSC playback)
Antenna:	75 ohm unbalanced
Receiving channel:	VHF Channel E2-E12, S1-S20 UHF Channel E21 -E 69 UHF Channel E30 - E39 (Adjustable). Preset to E36 Channel
RF converter output signal:	AC 220V, 50 Hz
Power requirement:	Approx. 19W (220V/50Hz)
Power consumption:	5°C to 40°C
Operating temperature:	- 20°C to 60°C
Storage temperature:	Approx. 4.5 kg
Weight:	380 mm (W) x 325 mm (D) x 89.8 mm (H)
Dimensions:	
VIDEO	
Input:	1.0 Vp-p, 75 ohm
Output:	1.0 Vp-p, 75 ohm
AUDIO	
Input:	0 dBs = 0.775 Vrms
Output:	Line: - 8 dBs, more than 47k ohm Line: - 8 dBs, less than 1k ohm
Accessories included:	Antenna 75 ohm coaxial connector cable (plug provided) Operation Manual Infrared remote control Battery AC Cord
Note:	As part of our policy of continuous improvement, we reserve the right to alter design and specifications without notice.
	The antenna must correspond to the new standard DIN 45325 (IEC 169 - 2) for combined UHF/VHF antenna with 75 ohm connector.

DISASSEMBLY AND REASSEMBLY

1. Remove 4 screws ① from the top cabinet, and remove the top cabinet by sliding it backward.
2. Remove 3 screws ② from the bottom plate, and remove the bottom plate by sliding it backward.
3. Remove 5 clips ③ from the upper and lower parts of front panel, respectively, and remove the front panel.
4. Remove 2 screws ④ and the clip from the main PWB holder.
5. Remove 2 screws ⑤ from the antenna terminal board.
6. Remove 2 screws ⑥ from the tuner IF PWB.
7. Remove 1 screw ⑦ from the power unit holder.
8. Remove 2 screws ⑧ from the power unit.
9. Remove 2 screws ⑨ from the head amp unit.
10. Remove 1 screw ⑩ from the cassette housing control assembly.
11. Remove 2 cassette housing control assembly mounting screws ⑪ .
12. Remove 3 mechanism chassis mounting screws ⑫ .
13. Remove 2 clips from the timer PWB ⑬ .

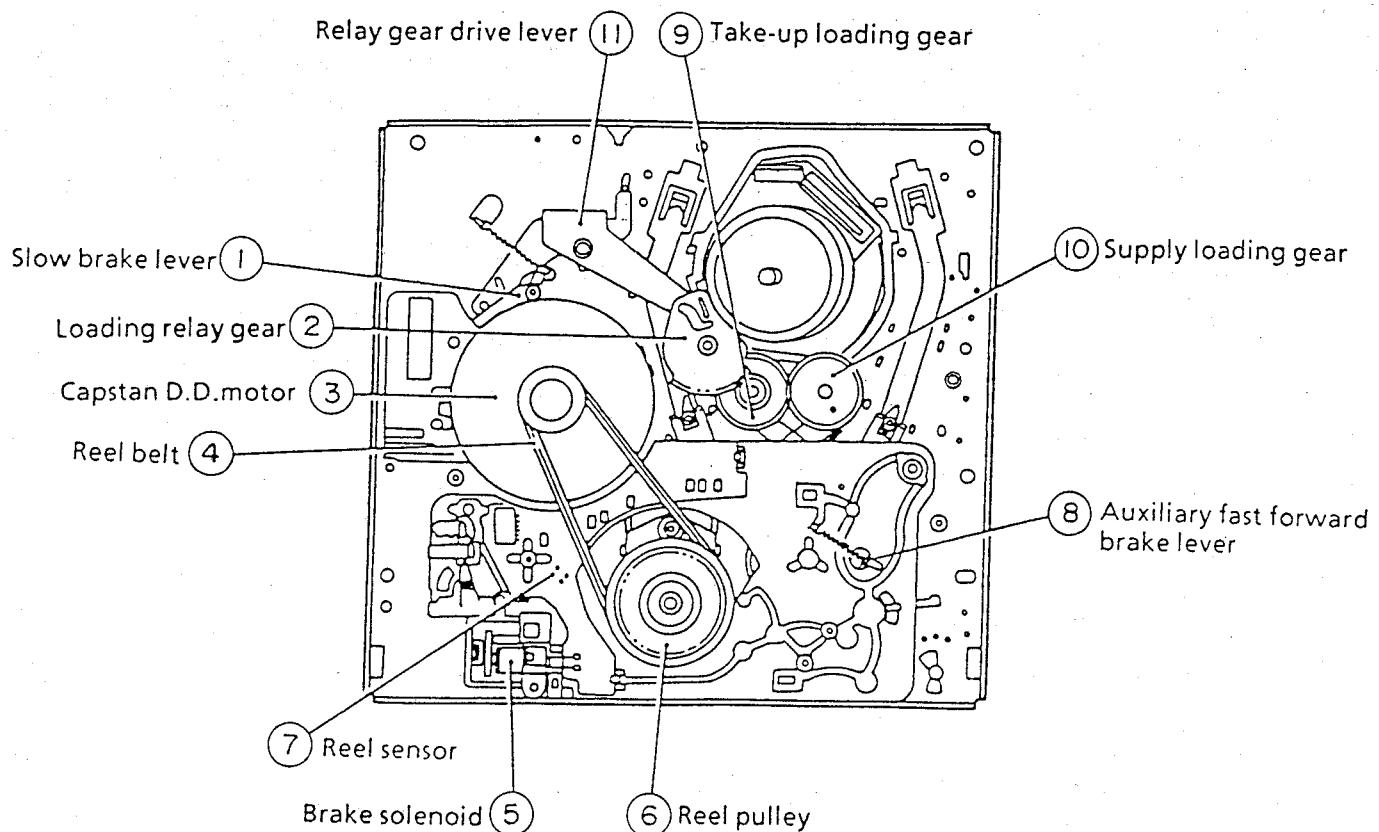

FUNCTION OF MAJOR MECHANICAL PARTS (TOP VIEW)

No.	Function	No.	Function
1.	Full erase head ass'y Erase the whole records on the tape in the recording mode.	13.	Reverse guide Pulls out the tape in the video search rewind mode, and controls the tape drive train height with the upper and lower guides.
3.	Tension arm ass'y Detects the tension of tape while running, and brakes the supply reel disk via the tension band.	15.	Relay shifter lever Transmits the operation of the master cam to the brake shifter, and operates the reverse guide.
4.	Brake shifter Set the position of brake or the like in accordance with the modes such as stop and playback.	16.	Pinch roller lever ass'y Press-fits the tape to the capstan during tape running. The right protrusion switches the clutch of the cassette housing control assembly in "tape eject", and makes the mechanism eject the tape.
5.	Back tension lever Brakes the supply reel disk to a certain degree to prevent tape slackening during "half-loading", "loading" and "shifting from playback to picture scan rewind".	17.	Master cam Turns clockwise during loading, and counterclockwise during unloading, and moves the shifter or the like in accordance with each mode.
7.	Main supply brake lever Brakes the supply reel disk to prevent tape slackening when the unit is stopped in fast forward or rewind mode.	18.	Loading motor A motive power which drives the mechanism. It transmits the power to the master cam and cassette housing control assembly via the belt.
9.	Main take-up brake lever Brakes the take-up reel disk to prevent tape slackening when the unit is stopped in fast forward or rewind mode.	19.	Cam switch Rotates synchronously with the master cam, and detects the position of each mode by means of the internal switch.
10.	Half-loading lever Bring the tape in contact with the A/C head, putting it in half-loading state in the fast forward or rewind mode.	23.	Dew sensor An element which detects condensation inside the unit. This element is activated, when it senses condensation, to interrupt the mechanism.
11.	Video search brake lever It is in contact with the take-up reel disk normally, and brakes it to a certain degree. It applies larger brake in the video search rewind mode.		

FUNCTION OF MAJOR MECHANICAL PARTS (BOTTOM VIEW)

No.	Function	No.	Function
1.	Slow brake lever Gets in contact with the capstan D.D. motor linking to the master cam in the slow still mode, and brakes it to a certain degree.	7.	Reel sensor An element which sheds the light onto the reflection plate affixed to the bottom side of the reel disk, and detects the rotation of the reel disk through receiving the reflected light.
3.	Capstan D.D. motor A motive power which runs the tape. It transmits the power via the reel belt.	8.	Auxiliary fast forward brake lever Brakes the supply reel disk to a certain degree in the fast forward and rewind modes.
4.	Reel belt Transmits the power to run the tape to the reel pulley.	9.	Take-up loading gear Shifts the take-up pole base and guide roller via the loading relay gear, and applies the tape around the drum assembly, as well as transmits the power to the supply loading gear.
5.	Brake solenoid Adsorbs and holds the brake shifter in the fast forward and rewind modes, and releases it in the stop mode.	10.	Supply loading gear Shifts the supply pole base and guide roller via the take-up loading gear, and applies the tape around the drum assembly.
6.	Reel pulley transmits the power of the capstan D.D. motor to the reel disk via the reel idler.	11.	Relay gear drive lever Transmits the movement of the master cam to the take-up loading gear via the loading relay gear.

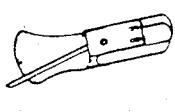

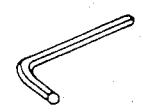

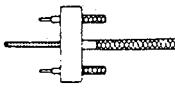

ADJUSTMENT, REPLACEMENT AND ASSEMBLY OF MECHANICAL UNITS

Here we will describe a relatively simple service work in the field, not referring to the more complicated repairs which would require the use of special equipment and tools (drum assembly replacement, for example).

We are sure that the easy-to-handle tools listed below would be more than handy for periodical maintenance to keep the machine in its original working condition.

TOOLS NECESSARY FOR ADJUSTING THE MECHANICAL UNITS

The following tools are required for proper service and satisfactory repair.

No.	Jig Item	Part No.	Code	Configuration	Remarks
1	Reel Disk Height Adjusting Jig	JiGRH0002	BR		These Jigs are used for checking and adjusting the reel disk height
2	Master Plane Jig	JiGMP0001	BY		
3	A/C Head Tilt Adjusting Jig	JiGACH-F18	BU		This Jig is used for setting the A/C head tilt.
4	Torque Gauge (90g)	JiGTG0090	CM		These Jigs are used for checking and adjusting the torque of take-up and supply reel disks.
	Torque Gauge (1.2 kg)	JiGTG1200	CN		
5	Gauge Head	JiGTH0006	AW		
6	Cassette Torque Meter	JiGVHT-063	CZ		This cassette torque meter is used for checking and adjusting the torque of take-up for measuring tape back tension.
7	Tension Gauge (300g)	JiGSG0300	BF		There are two Gauges used for the tension measurements, 300 g and 2.0 kg.
	Tension Gauge (2.0kg)	JiGSG2000	BS		
8	Hex Wrench (0.9mm)	JiGHW0009	AE		These Jigs are used for loosening or tightening special hexagon type screws.
	Hex Wrench (1.2mm)	JiGHW0012	AE		
	Hex Wrench (1.5mm)	JiGHW0015	AE		
9	Alignment Tape (PAL)	VROCPSV	CK		These tapes are especially used for electrical fine adjustment.
	Alignment Tape (NTSC)	VROATSV			
	Alignment Tape (NTSC)	VRONBZZS			
10	Drum Replacing Jig	JiGDT-0001	BG		This is used for replacement of the VCR's upper drum.

No.	Jig Item	Part No.	Code	Configuration	Remarks
11	Tension Gauge Adapter	JiGADP003	BK		This Jig is used with the tension gauge. Rotary Transformer Clearance Adjusting Jig.
12	Special Bladed Screwdriver	JiGDRiVERH-4	AP		This Screwdriver is used for adjusting the guide roller height.
13	Tension Band and Plate Adjusting Jig	JiGDRiVER-6	BM		This Jig is used for adjusting the tension band and tension plate.
14	Torque Driver	JiGTD1200	CB		This is used to screw down resin-made parts: the specified torque is 5 kg.
15	Box Driver	JiGDRiVER110-7	AS		This Jig is used for height adjustment of the A/C head, and X-position.
		JiGDRiVER110-4	AV		This Jig is used for height adjustment of the retaining guide.
16	Retaining Guide Height Adjusting Jig	JiGGH-F18	BU		This Jig is used for height adjustment of the retaining guide.
17	Reverse Guide Height Adjusting Jig	JiGRVGH-F18	BU		This Jig is used for height adjustment of the reverse guide.

MECHANICAL PARTS REQUIRING PERIODICAL INSPECTION

Use the following table as a guide to maintain the mechanical parts in good operating condition.

Parts	Maintained 500 hrs.	1000 hrs.	1500 hrs.	2000 hrs.	3000 hrs.	Possible symptom encountered	Remarks
Guide roller ass'y	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Abnormal rotation or significant vibration requires replacement.
Supply impedance roller	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Clean with pure high quality isopropyl alcohol.
Supply impedance roller (inner hole and shaft)		<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>		Clean tape contact part with the specified cleaning liquid.
Supply impedance roller flange	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		
Retaining guide	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		
Slant pole	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		
Video head	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Poor S/N ratio, no colour	
Full-erase head	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Poor colour, beating	Clean tape contact area with the specified cleaning liquid.
A/C head	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Sound too small or distorted	
Capstan D.D. Motor	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	No tape running, uneven colour	
Pinch roller	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	No tape running, tape slack	
Reel belt		<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>	No tape running, tape slack, no fast forward/rewind motion	Clean rubber and rubber contact area with the specified cleaning liquid.
Loading belt		<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>	Cassette not loaded or unloaded	
Cassette loading belt		<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>		
Tension band ass'y				<input type="checkbox"/>		Lateral image swing	
Loading Motor				<input type="checkbox"/>		Cassette not loaded or unloaded	
AHC (Automatic Head Cleaner)		<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>		Replace the roller of the cleaner when it wears down. Just change the AHC roller assembly for new one.
Reel block*						See the chart below.	

*See the table below for servicing the reel block parts.

Supply/Take-up reel disks	<input type="checkbox"/>	No tape running, tape slack	Clean with pure high quality isopropyl alcohol.				
Video search brake lever				<input type="checkbox"/>			
Idler gear ass'y				<input type="checkbox"/>		No tape running	
Reel Pulley	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>		
Main supply/take-up brake levers				<input type="checkbox"/>		Tape slack	

NOTE: : Part replacement.: Cleaning (For cleaning, use a lint-free cloth dampened with pure isopropyl alcohol).: Oil refilling (The indicated point should be lubricated with high quality spindle oil every 1000 hrs.).

If the reading is out of the specified value, clean or replace the part.

REMOVAL AND REASSEMBLY OF CASSETTE HOUSING CONTROL ASSEMBLY

● Removal

1. Set the cassette ejected condition in the cassette eject mode.
2. Unplug the recorder from the main source.
3. Follow the procedures below in the specified order.
 - a) Remove the cassette loading belt ①.
 - b) Disconnect the FFC (Full Flat Cable) ②.
 - c) Remove the cassette housing installation screws ③.
 - d) Slide and pull out the cassette housing control assembly ④ upward.

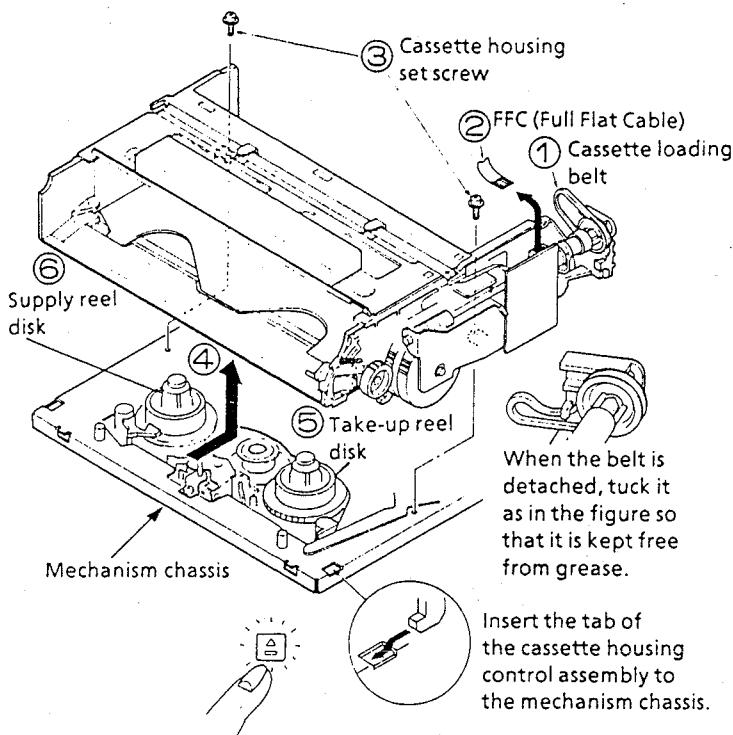

Figure 1-1.

● Reassembly

1. Before installation of the cassette housing control assembly, place the unit in the stop mode with the power on, then unplug the power cord. (The main body is placed in the eject mode.)
2. Follow the procedures for removal in the reverse order.

Notes:

1. Be sure to unplug the power cord in removal and reassembly.
2. Keep the cassette loading belt free from grease. In case of its adhesion, clean the belt.
3. In using a magnet screw driver, be sure to keep it away from the A/C head, FE (Full Erase) head, or the drum.

4. In removal and reassembly, take care not to hit the cassette housing control assembly or tools against the guide pin, drum, or the like thereabout.
5. Place the unit in the eject mode in removal or reassembly of the cassette housing control assembly.
6. Load the cassette once onto the cassette housing control assembly after reassembly. (If the cassette housing control assembly normally operates after this, the phases of mechanism and the cassette controller are accurately adjusted after ejection.)

MECHANICAL OPERATION CHECK WITHOUT CASSETTE

When power is on, the general operations of the mechanism can be checked without a cassette. Note the following points.

1. Check video search rewind and rewind, rotating the take-up reel disk ⑤ by hand (in either normal or reverse direction). If it is not rotated, the reel sensor works to shift the mechanism to the eject mode.
2. When the stop button is pressed, the mechanism does not stop at a normal stop position. It shifts to the eject mode and stops.
3. When the stop button is pressed in the playback, video search rewind, and video search forward modes, the supply reel disk ⑥ keeps on rotating for several seconds for elimination of tape slack in the course of shifting to the eject mode. In such a case, rotate the take-up reel disk ⑤ somewhat by hand, and the supply reel disk ⑥ stops, which can reduce the working time.

REPLACEMENT OF WORM WHEEL ASSEMBLY

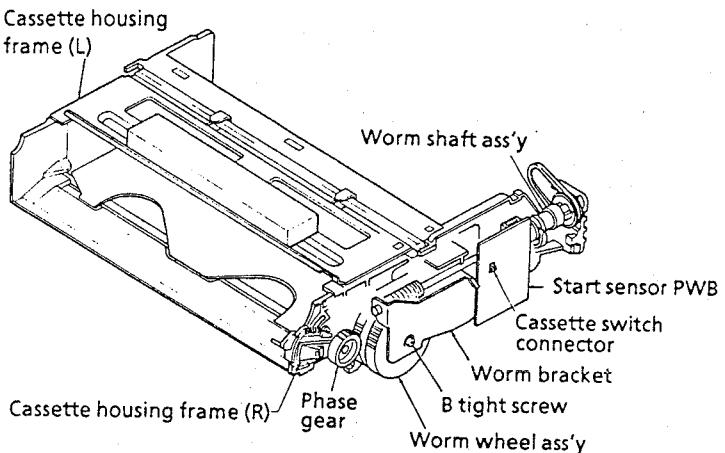

Figure 1-2.

● Removal

1. Unsolder the cassette switch connectors (No. 16, 17) from the start sensor PWB.

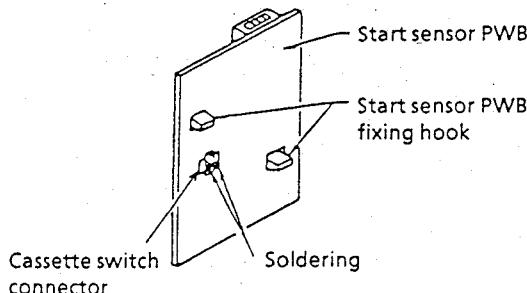

Figure 1-3.

2. Lift the start sensor PWB pressing the two start sensor PWB fixing hooks inward.

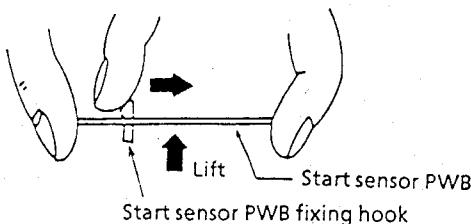

Figure 1-4.

3. Unscrew one B tight screw to detach the worm bracket.

Note:

The worm shaft bearing can easily come out of position. So be careful not to lose it.

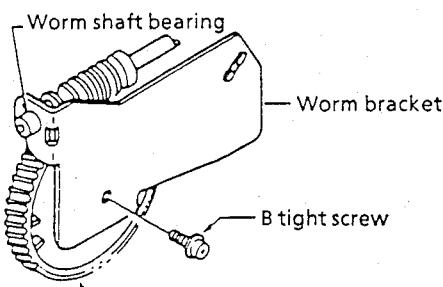

Figure 1-5.

4. Remove the worm shaft assembly, pulley, and cassette loading belt all from the cassette housing frame (R).

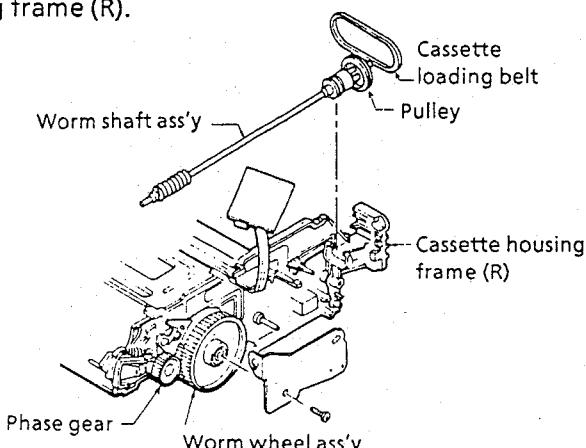

Figure 1-6.

5. Place the slider pin just above the worm wheel assembly (Figure 1-7). (The retainer of the slider is locked at two positions. So unlock it as in the Figure 1-8.)

6. Pull out the worm wheel assembly toward you pressing the switch lever upward. (Figure 1-7)

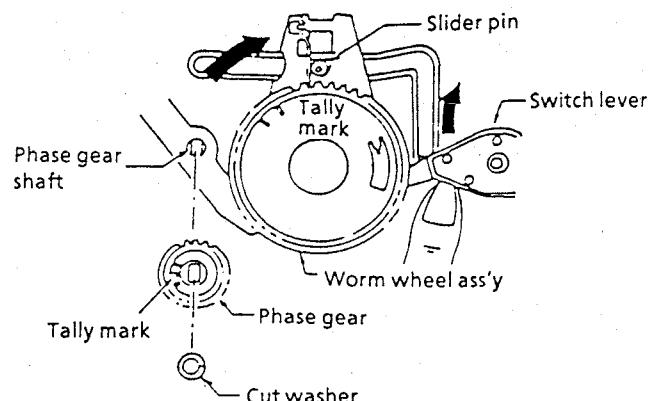

Figure 1-7.

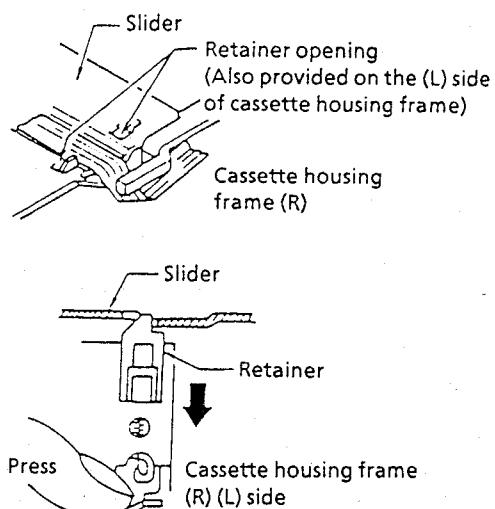

Figure 1-8.

● Reassembly

1. Turn the phase gear clockwise until the slider comes to a halt in the cassette insertion direction. (See the Figure 1-9.)
2. Insert the set up worm wheel gear assembly into the cassette housing frame (R), matching the mark on the phase gear with the mark on the worm wheel gear. Detach the cut washer on the phase gear assembly and the phase gear for easier installation of worm wheel assembly.

Note:

Make sure that the slider pin is in the groove of the drive gear arm.

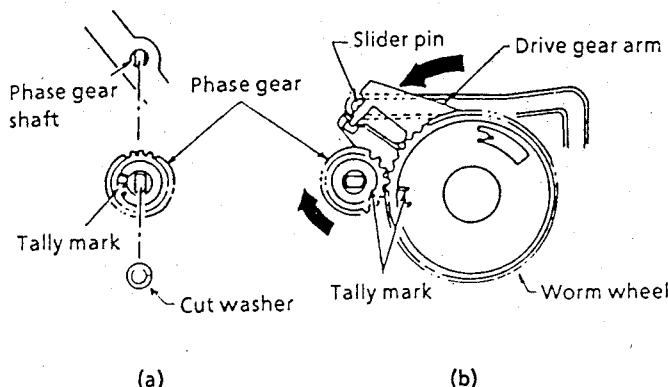

Figure 1-9.

3. Install the pulley and the cassette loading belt on the worm shaft assembly. Couple the clutch to the clutch lever. And mount them together in the cassette housing frame (R).

Note:

Keep in mind that the clutch switching lever should be in the correct position. The mechanism might malfunction if the lever is slightly out of position. (See page 12.)

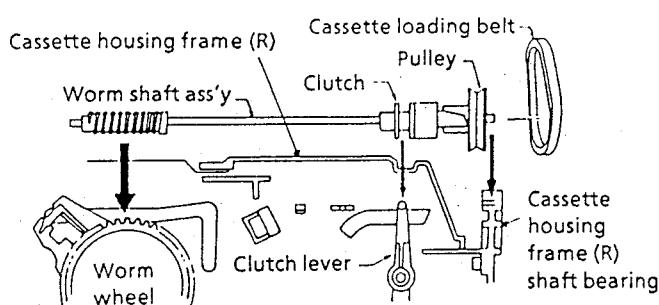

Figure 1-10.

4. Attach the worm bracket to the worm shaft assembly. Place them onto the boss on the cassette housing frame (R).

Note:

Insert ① before screwing into ② and ③.

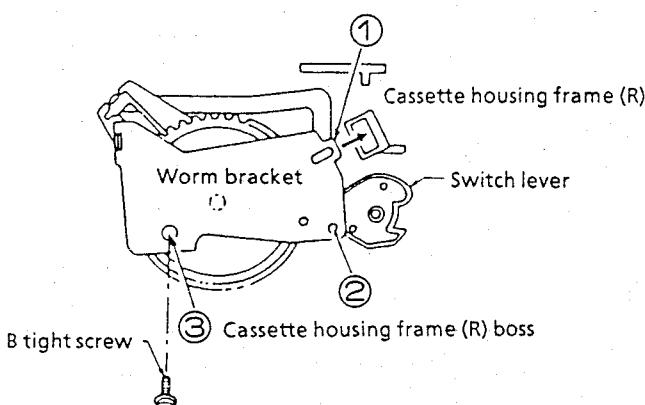

Figure 1-11.

5. Tighten one B tight screw.

Note:

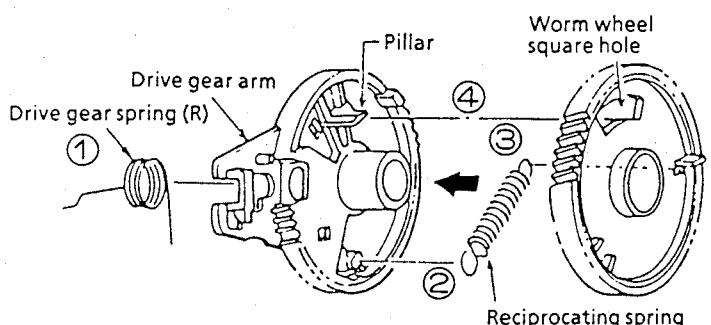

Do not overtighten the B tight screw (no more than 5.0 ± 0.5 kg.cm), because the lower threads of the screw hole at the resin-made boss can be broken.

6. Place the start sensor PWB on the cassette housing frame (R).

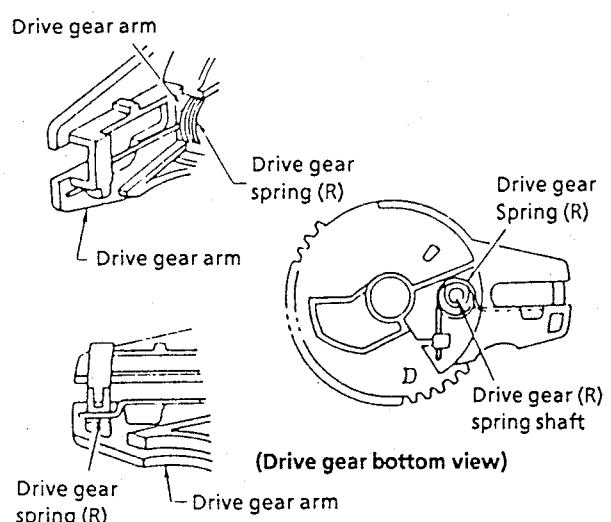

Note:

Check that the switch connectors (No. 16, 17) are in the cassette switch mounting hole.

7. Finally resolder the cassette switch connector to the start sensor PWB.

REASSEMBLY OF DRIVE GEAR

(a)

(b)

Figure 1-12.

- Pass the tip of the drive gear spring (R) ① through the square hole of the drive gear (R) to hook the spring in position.
- Hook one end ② of the reciprocating spring to the catch of the drive gear (R).
- Hook the other end ③ of the reciprocating spring to the catch of the worm wheel.
- Insert the pillar ④ of the drive gear (R) into the square hole of the worm wheel. Turn the worm wheel somewhat counterclockwise for insertion of the worm wheel to the drive gear (R), because the reciprocating spring is at work.

REPLACEMENT OF CASSETTE LOADING BELT

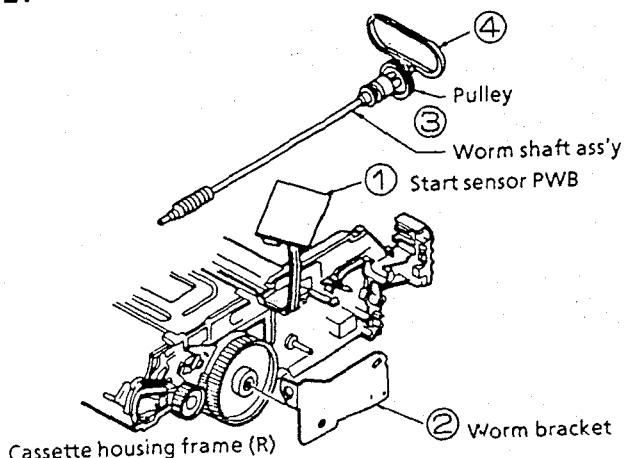

Figure 1-13.

1. Remove the start sensor PWB ① and worm bracket ② from the cassette housing frame (R).
2. Remove the worm shaft assembly ③.
3. Replace the cassette loading belt ④ with a new one.

Notes:

1. Do not overtighten the B tight screw which holds the worm bracket in position. The specified torque is 5.0 ± 0.5 kg.cm.
2. Make sure that the cassette loading belt is free from grease. If stained with grease, clean the belt with the cleaning liquid.
3. Perform checking of the clutch switch lever for proper action.

CHECKING THE CLUTCH SWITCH LEVER

• Checking

Place the mechanism in the cassette eject mode when removing and attaching the cassette housing from and to the mechanism chassis.

Make sure enough that each part in the cassette housing such as the clutch switch lever is in position. If not, it causes malfunction.

Note:

Figure 1-14 shows the position of each part in the cassette eject mode.

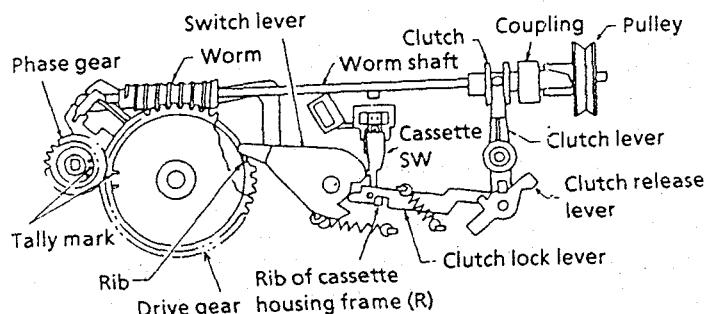

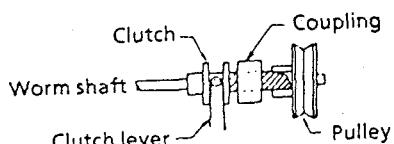

Figure 1-14.

1. First make sure that the tip of the switch lever is held at the rib of the drive gear (R).
2. Check that the rib of the cassette housing frame (R) and the concavity of the clutch lock lever are engaged.
3. Finally be sure that the relationship between the clutch lever and the clutch, as well as between the clutch and the pulley, are correct as in the Figure 1-15.

Check that the clutch is engaged with the pulley through the coupling.

Figure 1-15.

• Resetting

Take the following steps to reset the clutch if it is unlocked or if the switch lever and the clutch lock lever are unlocked.

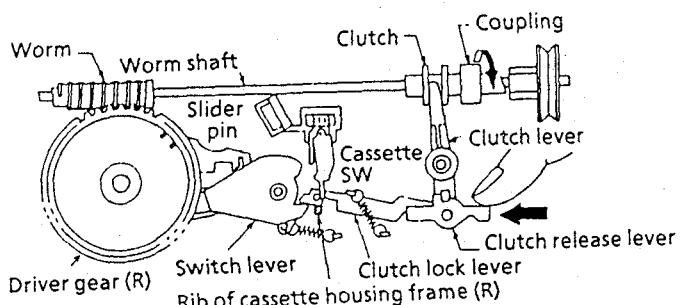

Figure 1-16.

1. Shift the slider by turning the coupling in the arrow direction (clockwise) until the slider pin is at the bottom of the slider groove as shown in the Figure 1-16. (The loading mode)

Note:

Note that the slider is equipped with a lock mechanism. Unlock the locks on cassette housing frames (L) and (R) side before shifting the slider.

2. When the position is set as shown in the Figure 1-16, push the clutch release lever in the direction of the arrow by hand until the clutch lock lever becomes tightly locked by the rib of the cassette housing frame (R).
3. Then turn the coupling counterclockwise until the slider reaches the cassette insertion opening and the reciprocating spring is activated.

Note:

There is no need to unlock the slider when shifting the slider to the cassette insertion opening. Just keep shifting the slider.

REPLACEMENT OF LOCK RELEASE LEVER

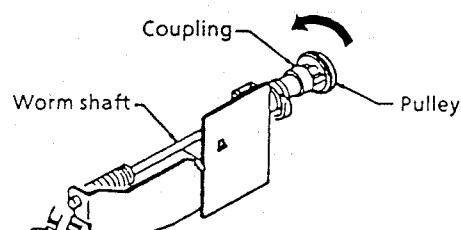

• Removal

1. Place the slider in the cassette down position. (Turn the coupling on the worm shaft clockwise until the slider is in the cassette down position.)

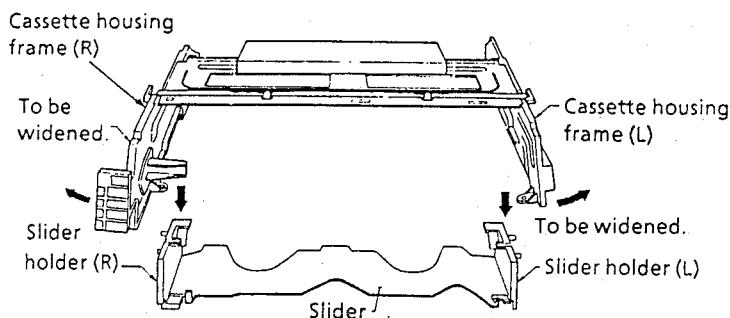

Note:

Before shifting, unlock the slider.

2. Slightly widen the cassette housing frames (R) and (L) to unhook the slider holders (R) and (L) of the slider assembly off the grooves of the cassette housing frames.

(a)

(b)

Figure 1-17.

3. Lift the slider holder (R) upward about 2mm off the slider by pressing two catches with a thin tip screw driver. Take care not to damage the catches.

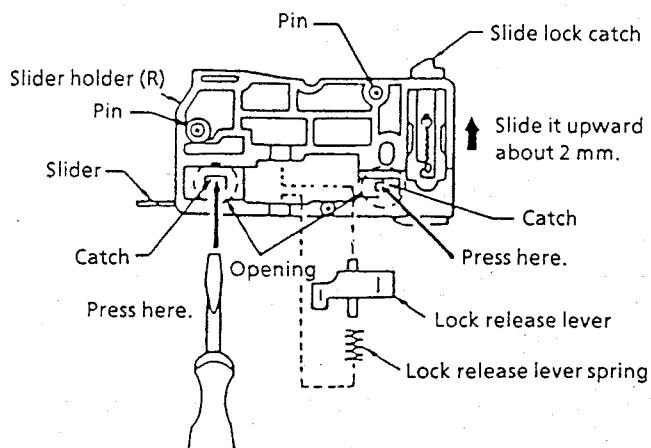

Figure 1-18.

4. Remove the lock release lever from the slider holder (R)

• Reassembly

1. Follow the steps for removal in the reverse order. (See Figures 1-17 and 1-18.)
2. Attach the lock release lever to the slider holder (R).
3. Slide the slider holder (R) downward so that the two catches of the slider holder (R) fit the opening of the slider.
4. Slightly widen the cassette housing frames, and set the pins of slider holders (R) and (L) into the grooves of the cassette housing frames.

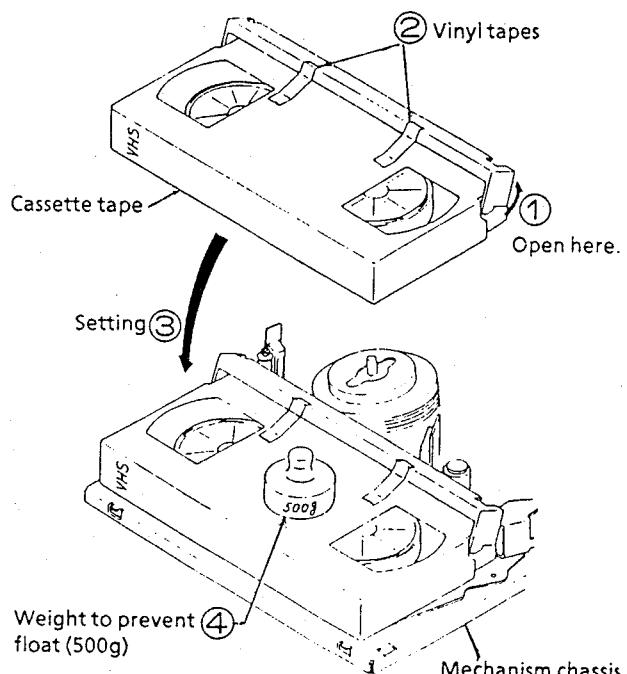

Note:

Check if the pins of the slider holders (R) and (L) fit the grooves of the cassette housing frames, and if the drive gear arm is sufficiently engaged with the slider holders.

5. Turn the coupling counterclockwise until the slider is at the cassette insertion opening.

TO RUN A TAPE WITHOUT THE CASSETTE HOUSING CONTROL ASSEMBLY

1. Plug in the power cord.
2. Turn on the power switch.
3. Open the lid ① of a cassette tape by hand.
4. Hold the lid with two pieces of vinyl tape ②.
5. Set the cassette tape in the mechanism chassis.
6. Weight the cassette tape with a weight ④ to prevent floating.
7. Perform running test.

Note:

The weight should not be more than 500 g.

Figure 1-19.

REPLACEMENT AND HEIGHT CHECKING AND ADJUSTMENT OF REEL DISKS

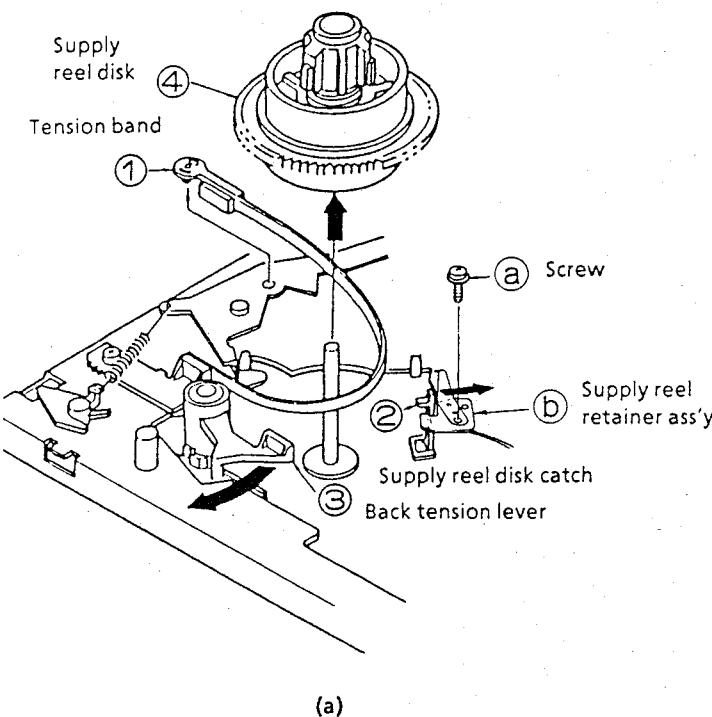

1. Remove the cassette housing control assembly.
2. Set the mechanism in the playback mode with no cassette tape in place. Unplug the power cord.
3. Set the idler gear in the center (neutral).

● Removal (Supply reel disk)

1. Remove the tension band ①. (Take care not to deform it.)
2. Unscrew the screw ② and remove the supply reel retainer assembly ⑥.
3. Release the supply reel disk catch ③ and back tension lever ④.
4. Pull the supply reel disk upward.

Note:

1. Take care not to deform the tension band.
2. Check and adjust the tension pole position. (See page 19.)
3. Be careful not to damage the gear and the idler gear on the supply reel disk.
4. Press the tension band in the direction of the arrow for removal (See Figure 1-20(b)).

(a)

Note:
When the tension band is pressed in the direction of the arrow for removal, the catch is hard to be deformed.

(b)
Figure 1-20.

● Removal (Take-up reel disk)

1. Unscrew the screw ⑤ and remove the take-up reel retainer.
2. Release the take-up reel disk catch ①.
3. Pull the take-up reel disk ② upward.

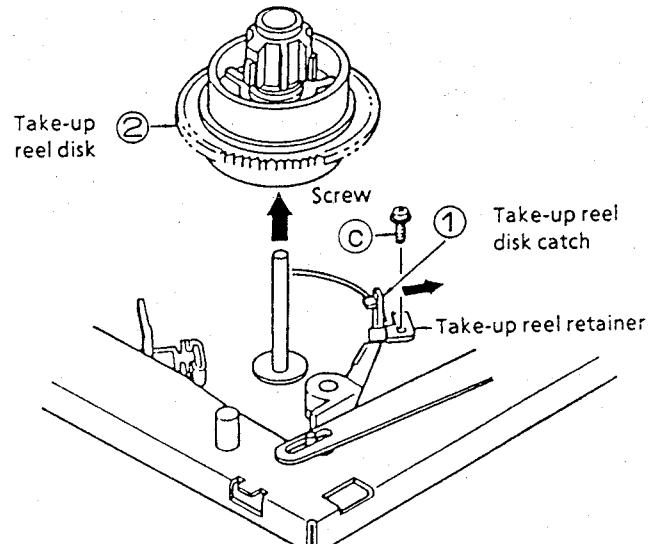

Figure 1-21.

● Reassembly (Supply reel disk)

1. Clean the reel disk shaft ① and apply oil to it.
2. Release the supply reel disk catch ② and back tension lever ③.
3. Install a new supply reel disk ④ onto the shaft.
4. Replace the tension band ⑤ around the supply reel disk, and insert it to the hole of the tension arm.
5. Replace the supply reel retainer assembly ⑥ in place, and tighten up the screw ②.

Note:

1. Take enough care not to deform the tension band during installation of the supply reel disk.
2. Be careful not to damage the supply reel disk gear, back tension lever, supply reel disk catch, or the like with tools.

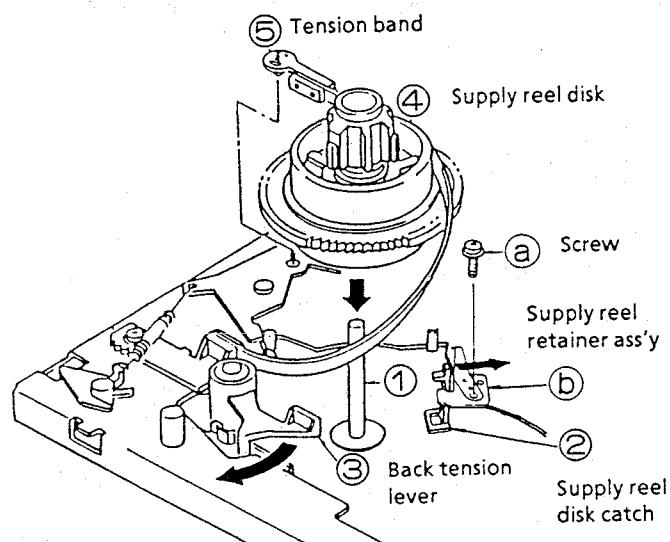

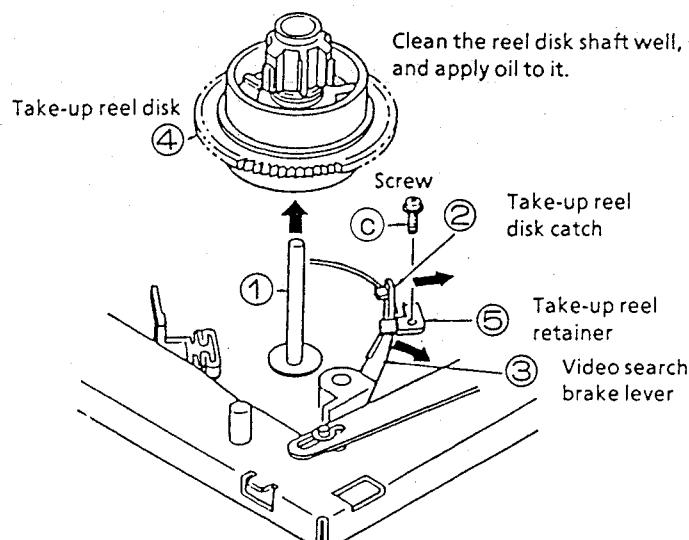

Figure 1-22.

● Reassembly (Take-up reel disk)

1. Clean the reel disk shaft ① and apply oil to it.
2. Release the take-up reel catch ② and video search brake lever ③.
3. Install a new take-up reel disk ④ onto the shaft.
4. Replace the take-up reel retainer ⑤ in position and tighten up the screw ⑥.

Note:

Take care not to damage the video search brake lever.

Apply a thin tip driver to the arrow position in releasing for easier setting of the take-up reel disk.

Figure 1-23.

- * After reassembly, check the video search rewind back tension (see page 18), and check the brake torque (see page 20).

● Height checking and adjustment

Note:

Place the master plane onto the mechanism unit, taking care not to hit the drum (see Figure 1-24).

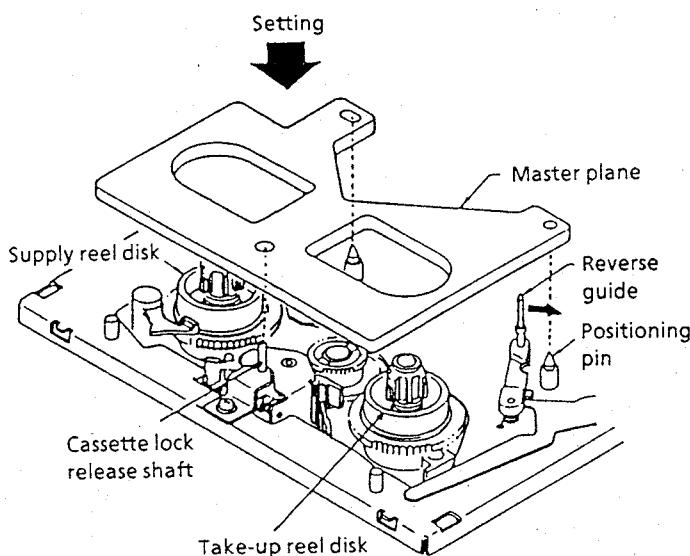

Figure 1-24.

1. For height adjustment, press the reel disk with a finger, and turn it right and left with a screwdriver (see Figure 1-26 (a)).

Set the master plane releasing the reverse guide by a finger.

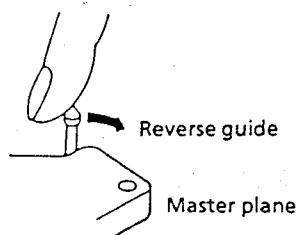

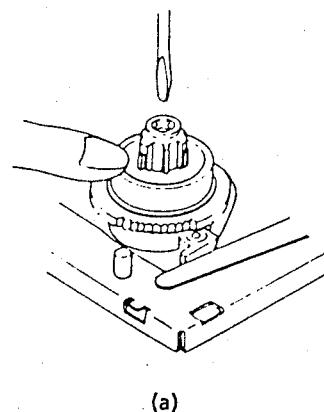

Figure 1-25.

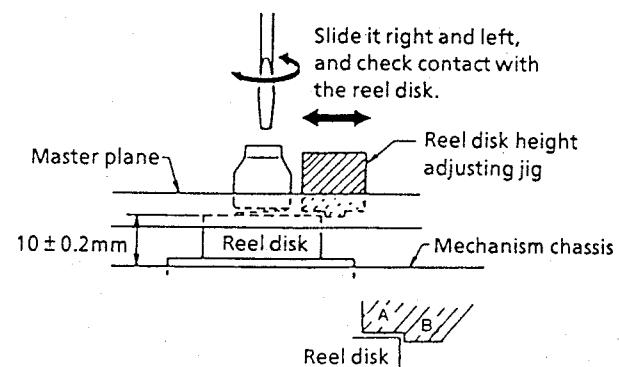

2. Check that the reel disk is lower than part A but higher than part B. If the height is not correct, adjust the height adjusting screw (see Figure 1-26 (b)).

Note:

Whenever replacing the reel disk, perform the height checking and adjustment.

(a)

(b)
Figure 1-26.

CHECKING AND ADJUSTMENT OF TAKE-UP TORQUE IN FAST FORWARD MODE

- Remove the cassette housing control assembly.
- Setting

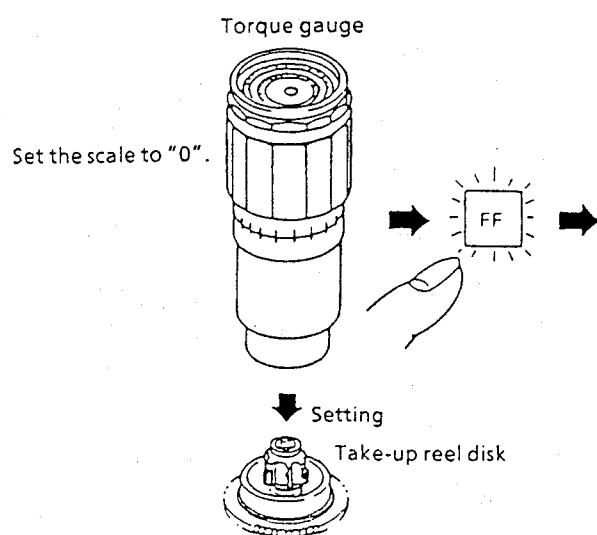

Figure 1-27.

CHECKING AND ADJUSTMENT OF TAKE-UP TORQUE IN REWIND MODE

- Remove the cassette housing control assembly.
- Setting

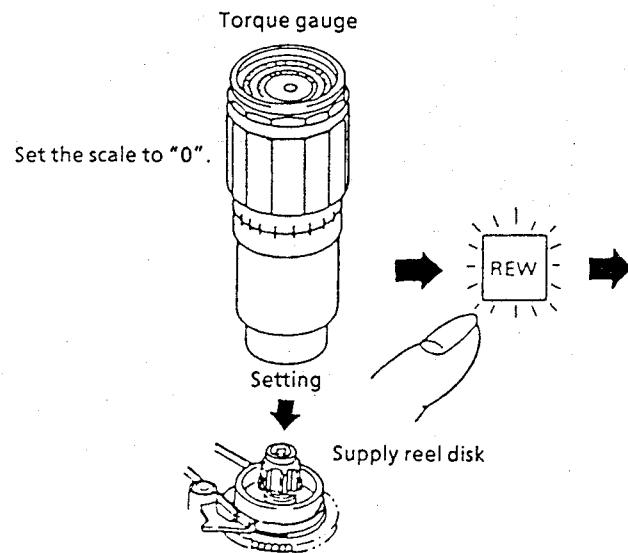

Figure 1-29.

• Checking

Turn the torque gauge slowly (one rotation every 2 to 3 seconds) by hand in the take-up direction

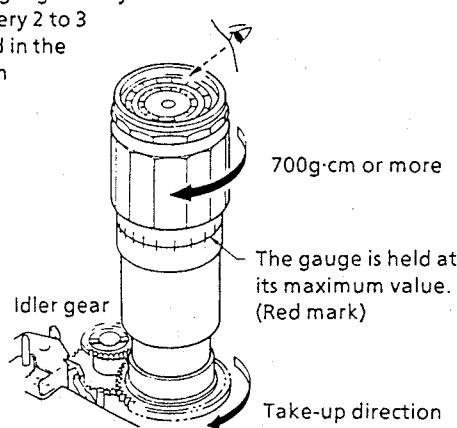

Figure 1-28.

• Checking

Turn the torque gauge slowly (one rotation every 2 to 3 seconds) by hand in the take-up direction

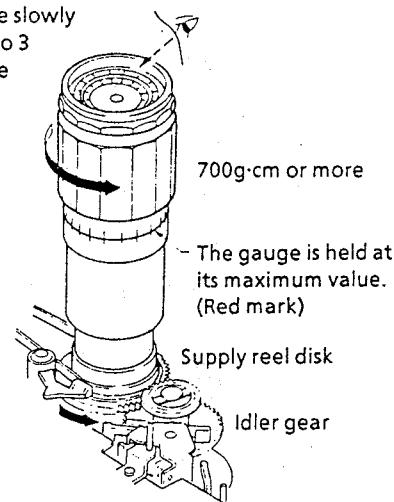

Figure 1-30.

• Adjustment

1. If the take-up torque is outside the range, clean the capstan D.D. motor pulley, reel belt and reel pulley with cleaning liquid, then recheck the torque.
2. If the take-up torque is still out of range, replace the reel belt.

Note:

1. Hold down the torque gauge so that it may not fly off.
2. When checking the take-up torque, do not keep the reel disk locked for a longer time.

• Adjustment

1. If the take-up torque is outside the range, clean the capstan D.D. motor pulley, reel belt and reel pulley with cleaning liquid, then recheck the torque.
2. If the take-up torque is still out of range, replace the reel belt.

Note:

1. Hold down the torque gauge so that it may not fly off.
2. When checking the take-up torque, do not keep the reel disk locked for a longer time.

CHECKING AND ADJUSTMENT OF TAKE-UP TORQUE IN PLAYBACK MODE

1. Remove the cassette housing control assembly.
2. Open the lid of the cassette torque meter, and hold it with pieces of vinyl tapes.

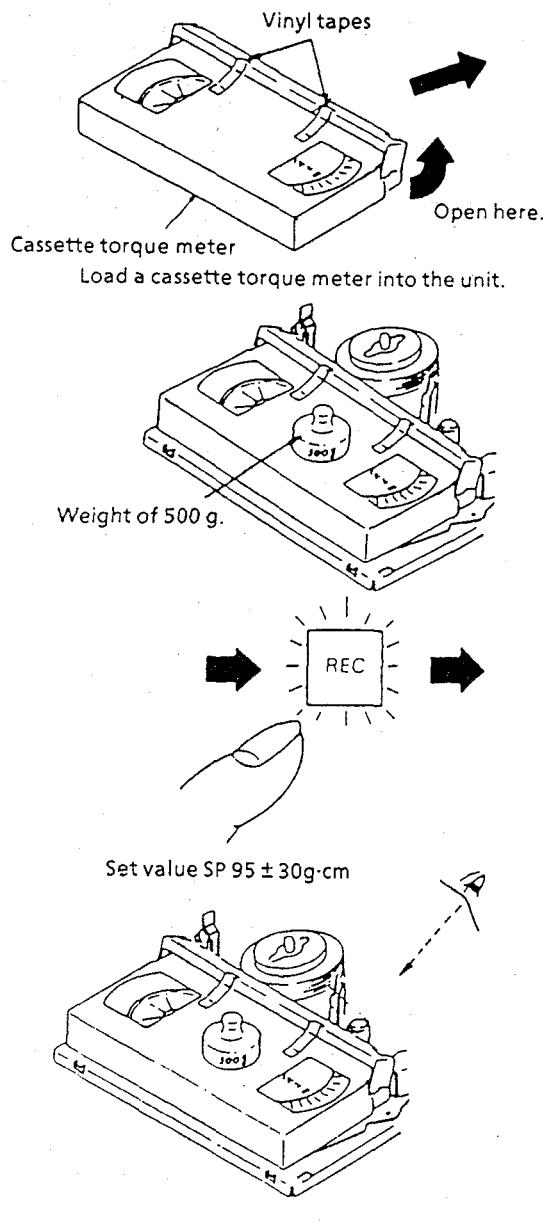

Figure 1-31.

• Checking

1. Check that the torque is in the range of $95 \pm 30 \text{ g}\cdot\text{cm}$.
2. The torque fluctuates due to the rotational deviation of the reel drive unit. Use the center of the fluctuation as the value.
3. Place the unit in the SP record mode, and check that the take-up torque is within the range.

• Adjustment

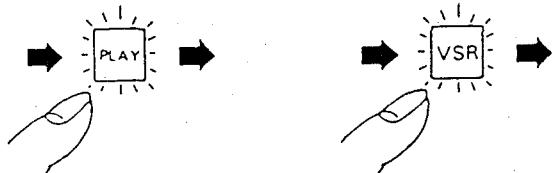

If the take-up torque in the playback mode is outside the range, replace the take-up reel disk.

Note:

Weight the cassette torque meter to prevent floating.

CHECKING AND ADJUSTMENT OF TAKE-UP TORQUE IN VIDEO SEARCH REWIND MODE

- Remove the cassette housing control assembly.
- Checking

Push the play button to place the unit in the playback mode.

Push the video search rewind button to place the unit in the video search rewind mode.

Place the torque gauge on the supply reel disk, and turn it counterclockwise very slowly (one rotation every 2 to 3 seconds) and check that the torque is within the set value $170 \pm 40 \text{ g}\cdot\text{cm}$

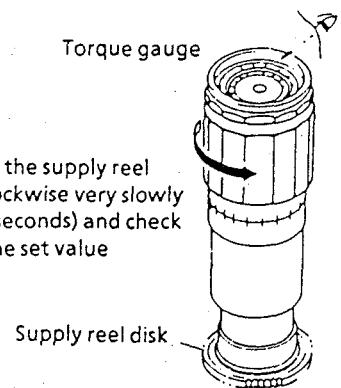

Figure 1-32.

Note:

Set the torque gauge securely on the supply reel disk. If it is not secure, the measurement will be incorrect.

• Adjustment

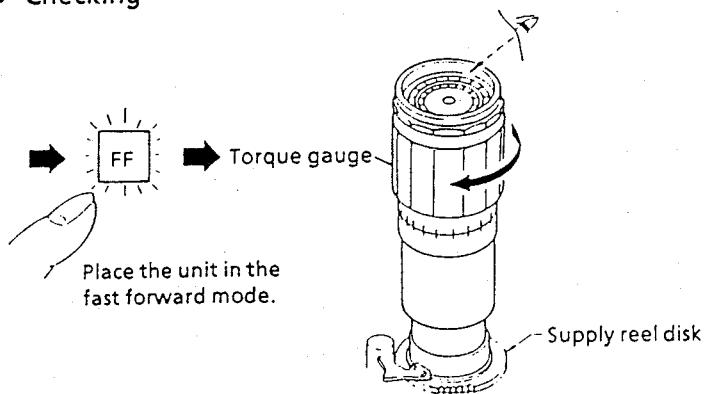

If the take-up torque in video search rewind mode is outside the range, replace the supply reel disk.

Note:

The torque fluctuates due to the rotational deviation of the supply reel disk. Use the center of the fluctuation at the value.

CHECKING THE FAST FORWARD BACK TENSION

- Remove the cassette housing control assembly.
- Checking

Place the torque gauge on the supply reel disk, and turn it clockwise very slowly (one rotation every 2 to 3 seconds) and check that the torque is within $15 \pm 5 \text{ g}\cdot\text{cm}$.

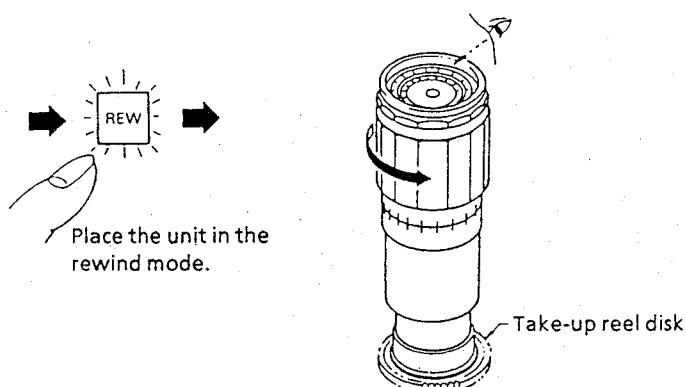

Figure 1-33.

Note:

Set the torque gauge securely on the supply reel disk. If the torque gauge is not securely set on the reel disk, measurement will be incorrect.

CHECKING THE REWIND BACK TENSION

- Remove the cassette housing control assembly.
- Checking

Place the torque gauge on the take-up reel disk, and turn it counterclockwise very slowly (one rotation every 2 to 3 seconds) and check that the torque is within $15 \pm 5 \text{ g}\cdot\text{cm}$.

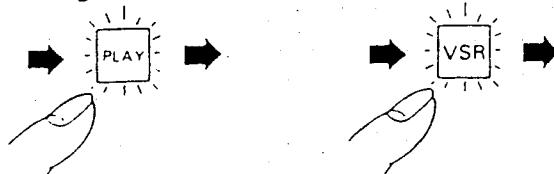

Figure 1-34.

Note:

Set the torque gauge securely on the take-up reel disk. If it is not secure, the measurement will be incorrect.

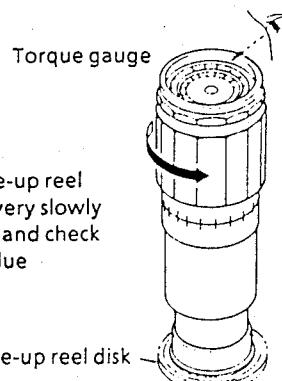

CHECKING THE VIDEO SEARCH REWIND BACK TENSION

- Remove the cassette housing control assembly.
- Checking

Push the play button to place the unit in the playback mode.

Push the video search rewind button to place the unit in the video search rewind mode.

Place the torque gauge on the take-up reel disk, and turn it clockwise very slowly (one rotation every 2 to 3 seconds) and check that the torque is within the set value $45 \pm 20 \text{ g}\cdot\text{cm}$.

Figure 1-35.

Note:

Set the torque gauge securely on the take-up reel disk. If it is not secure, the measurement will be incorrect.

CHECKING THE PINCH ROLLER PRESSURE

- Remove the cassette housing control assembly.

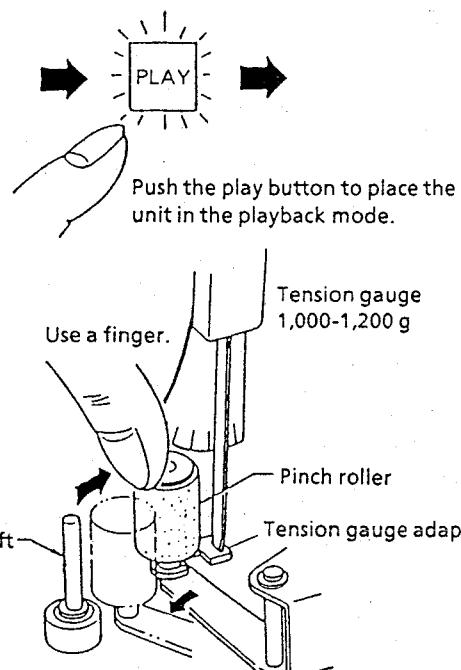

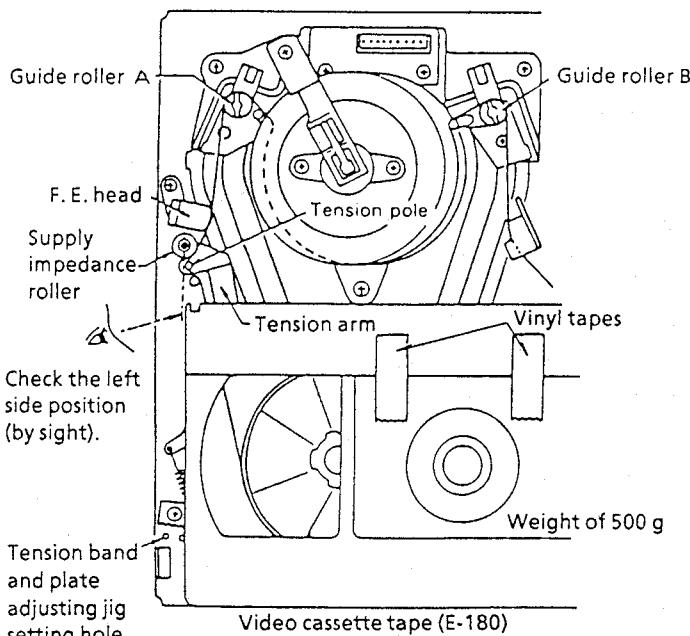

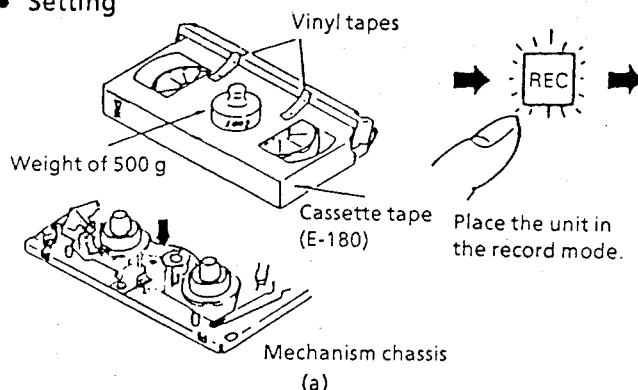

Figure 1-36.

1. Detach the pinch roller from the capstan shaft.
2. Set the tension gauge by hooking the tension gauge adapter onto the pinch roller shaft.
3. Gradually release the pressure to allow the pinch roller to touch the capstan shaft. When the pinch roller just touches the capstan shaft, read the indication on the gauge.
4. Check that the reading of the tension gauge is in the range of 1000 to 1200 g.

CHECKING AND ADJUSTMENT OF TENSION POLE POSITION

- Remove the cassette housing control assembly.

- Setting

(b)
Figure 1-37.

- Checking

1. The guide rollers (A, B) operate to bring the tape outside the cassette tape and simultaneously the tension pole moves to the left, loading the tape. At that time (loading completed), check the position of the tension pole.

2. At the beginning of the tape (E-180), check that the tension pole's left side is aligned with the supply impedance roller's center by sight.
3. Check that the end of the tape is neither curled against the flange of the supply impedance roller nor over it.
4. During the video search rewind mode with no cassette tape in place, check that the supply reel disk is free from the tension band.

- Position adjustment (record mode)

When the tension pole is at the right of the supply impedance roller's center:

Untighten the tightening screw, and shift the tension band adjustment bracket in the direction of the arrow using a tension band and plate adjusting jig until it is in the set value range (center). Then secure it with the tightening screw.

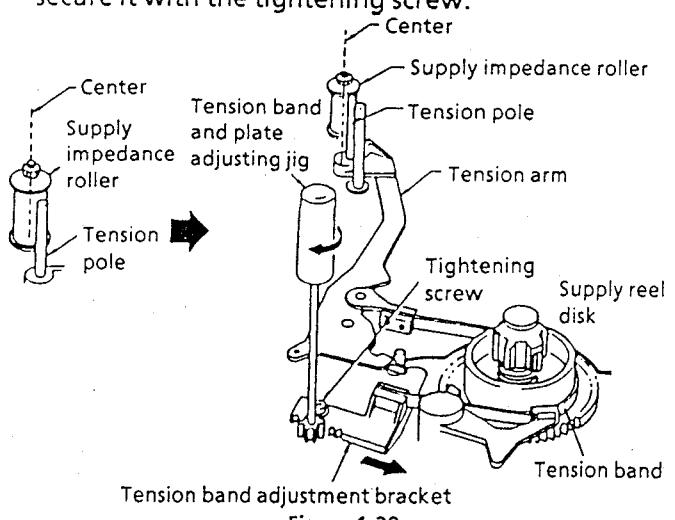

Figure 1-38.

- Position adjustment (record mode)

When the tension pole is at the left of the supply impedance roller's center:

Untighten the tightening screw, and shift the tension band adjustment bracket in the direction of the arrow using a tension band and plate adjusting jig until it is in the set value range (center). Then secure it with the tightening screw.

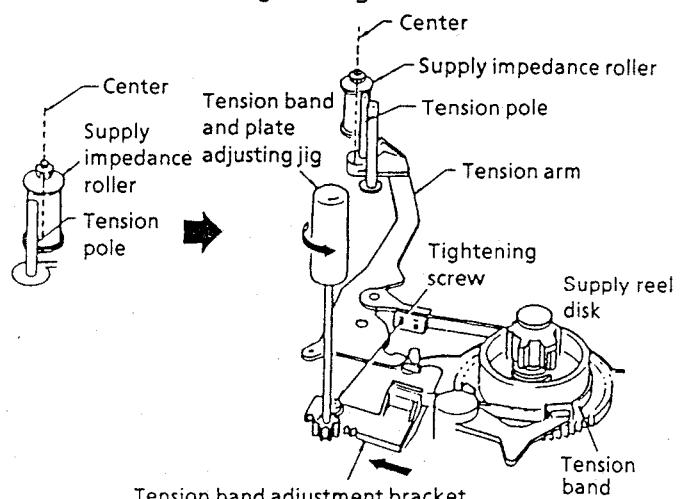

Figure 1-39.

CHECKING AND ADJUSTMENT OF RECORD / PLAYBACK BACK TENSION

- Remove the cassette housing control assembly.

- Checking

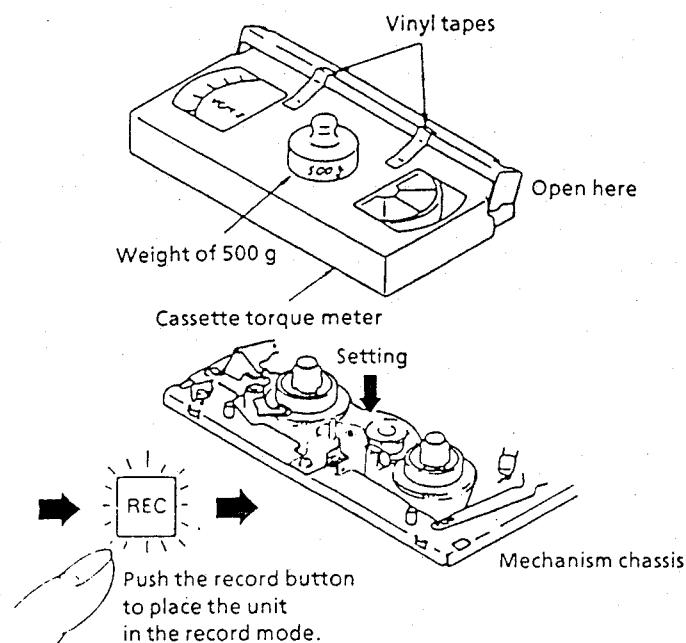

Figure 1-40.

1. Put a cassette torque meter into the unit.
2. Push the record button to place the unit in the record mode.
3. Check that the back tension indicated by the gauge is within the set range 31 to 36 g·cm.

Note:

1. Make sure that the video cassette tape is over the retaining guide.
2. Make sure that the tape is not slack nor damaged at either end.

- Adjustment

1. If the reading of the cassette torque meter is less than specified, move the tip of the tension spring hook plate toward the hole A.
2. If the reading of the cassette torque meter is more than specified, move the tip of the tension spring hook plate toward the hole B.

Note:

Put a thin screw driver (-) in the shaft hole, lean it toward you, and turn it for easier shift of the tension spring hook plate in the direction of A or B.

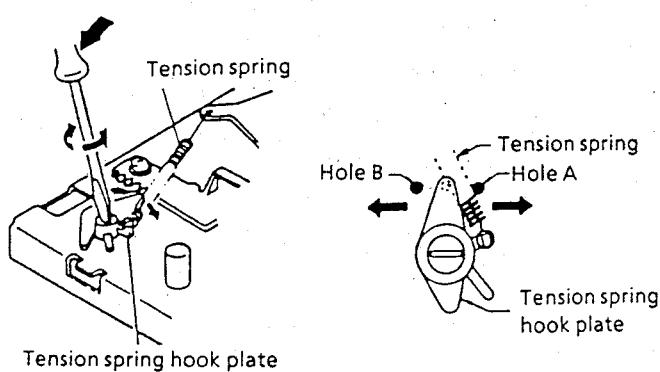

Figure 1-41.

CHECKING THE BRAKE TORQUE

- Checking the brake torque at the supply side

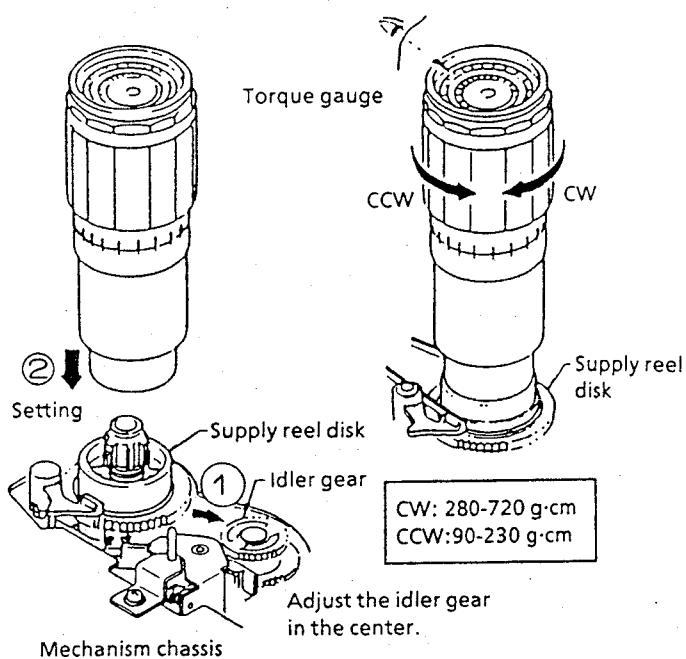

Figure 1-42.

1. Remove the cassette housing control assembly.
2. Place the mechanism in the stop mode by unplugging the power cord in the fast forward or rewind mode.
3. Slowly rotate the torque gauge in the clockwise (CW) direction and counterclockwise (CCW) direction of the supply brake so that the reel disk and the indicator of the torque gauge rotate at an equal rate. Check that the values are within the range of CW direction = 280 to 720 g·cm, CCW direction = 90 to 230 g·cm, and that the brake torque in the CW direction is at least twice as high as that in the CCW direction.

- Checking the brake torque at the take-up side

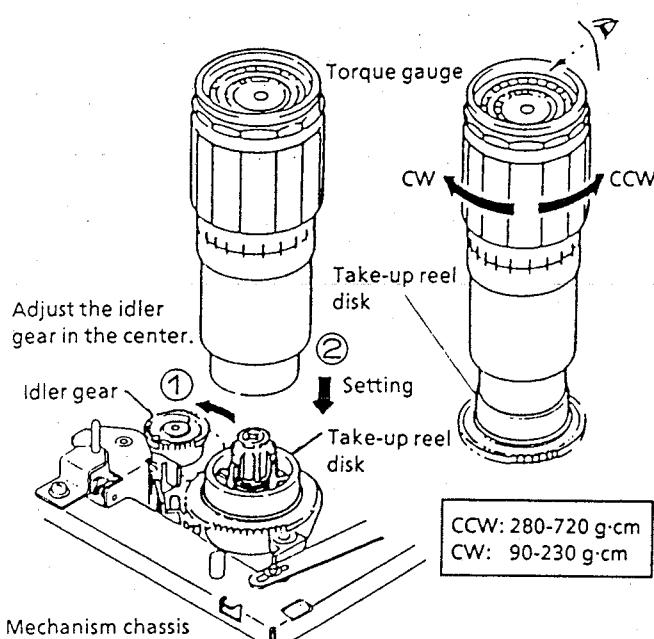

Figure 1-43.

1. Remove the cassette housing control assembly.
2. Slowly rotate the torque gauge in the clockwise (CW) direction and counterclockwise (CCW) direction of the take-up brake so that the reel disk and the indicator of the torque gauge rotate at an equal rate. Check that the values are within the range of CCW direction = 280 to 720 g·cm, CW direction = 90 to 230 g·cm, and that the brake torque in the CCW direction is at least twice as high as that in the CW direction.

- Adjustment of the brake torque at the supply side and the take-up side

1. If the supply or take-up brake torque is outside the range, clean the supply or take-up reel disk break lever felt, then recheck the torque.
2. If the supply or take-up brake torque is still outside the range, replace the main brake or the main brake spring.

REPLACEMENT OF MAIN BRAKE

1. Remove the reel belt and the reel block FFC (Full Flat Cable).
2. Remove the cut washer ① off the brake shifter.
3. Unscrew the four screws ② and then the take-up reel retainer.
4. Remove the reel block assembly ③ downward.
5. Remove the cut washer ④ first and then the reel pulley.
6. Unscrew the two screws ⑤ and detach the idler assembly.
7. Unhook the back tension lever spring ⑥ and remove the back tension lever ⑦. (Undo the hook under the reel chassis.)
8. Open the shifter latch ⑧ and remove the brake shifter assembly ⑨.
9. Release the reel disk catches ⑩ and then remove the left and right reel disk assemblies ⑪ and ⑫.
10. Finally remove the main brake levers ⑬ and the main brake spring ⑭.

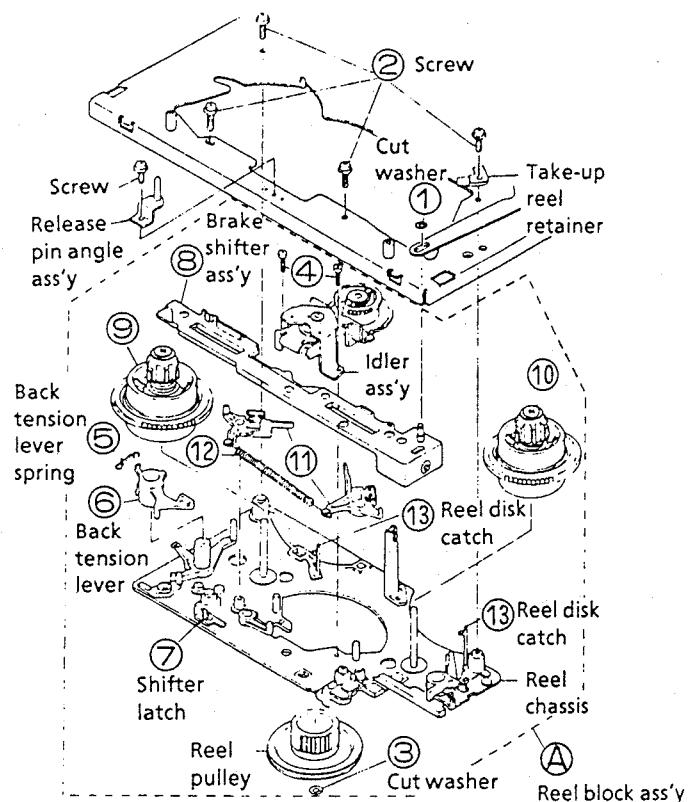

Figure 1-44.

Notes:

When the main brake is replaced, perform the height checking and adjustment (see page 15), and the brake torque checking (see page 20).

REPLACEMENT OF A/C (Audio/Control) HEAD

1. Remove the cassette housing control assembly.
2. Place the unit in the unloading mode, and unplug the power cord.

● Removal

1. Loosen the tilt adjusting screw ①.
2. Remove the azimuth adjusting screw ②.
3. Remove the A/C head screw ③.
4. Unsolder the A/C head PWB soldered to the A/C head assembly.

Notes:

1. After replacement, be sure to perform the adjustment of the tape drive train (see page 24). Under any circumstances, avoid touching the head. Clean the head, if touched with your finger, with alcohol.
2. Take care that the azimuth spring does not fly off when removing the A/C head screw.

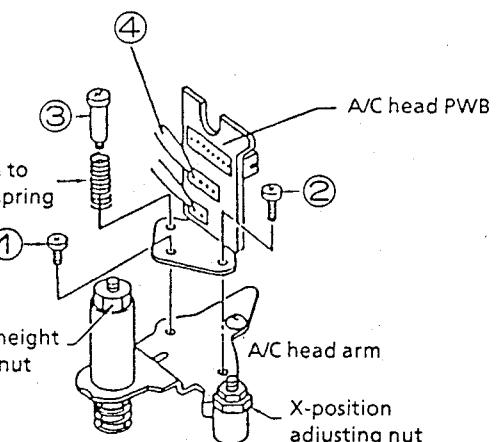

Figure 1-45.

● Replacement

1. Solder the removed A/C head PWB onto a new A/C head assembly.
2. The A/C head assembly is attached so that the A/C head arm and A/C head plate are roughly parallel to each other.

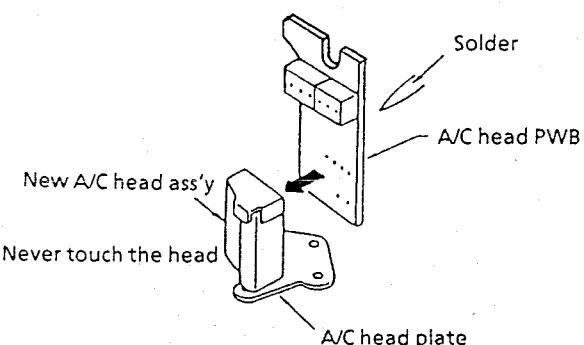

Figure 1-46.

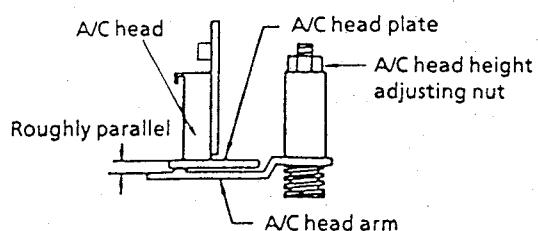

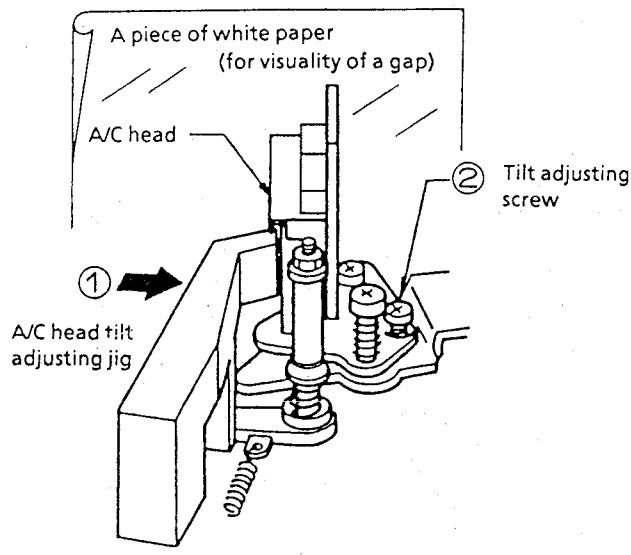

Figure 1-47.

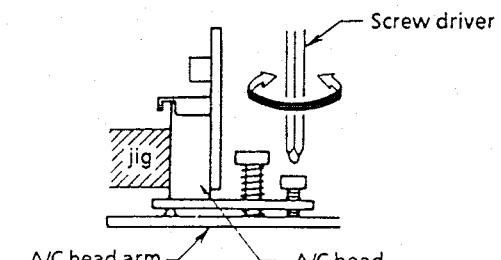

● Adjustment

[A/C head tilt angle]

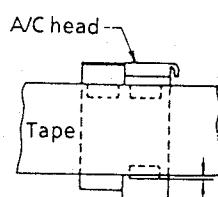

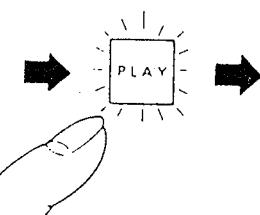

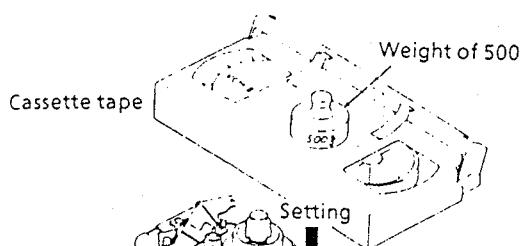

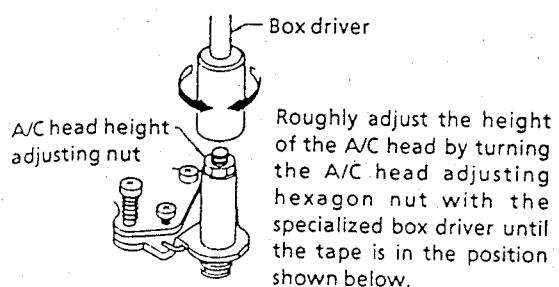

1. Set the mechanism to the loading mode.
2. Place the A/C head tilt adjusting jig ①.
3. Slowly turn the tilt adjusting screw ② with a screw driver until there is no gap between the jig and the A/C head.

(a)

(b)
Figure 1-48.

[A/C head height rough adjustment]

Adjust the nut visually so that the control head is visible 0.3 to 0.5 mm below the bottom of the tape.

Figure 1-49.

[Height adjustment of retaining guide]

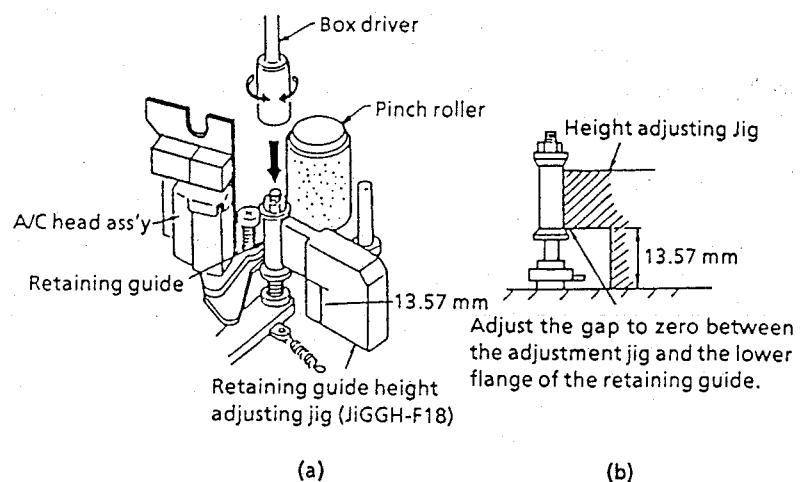

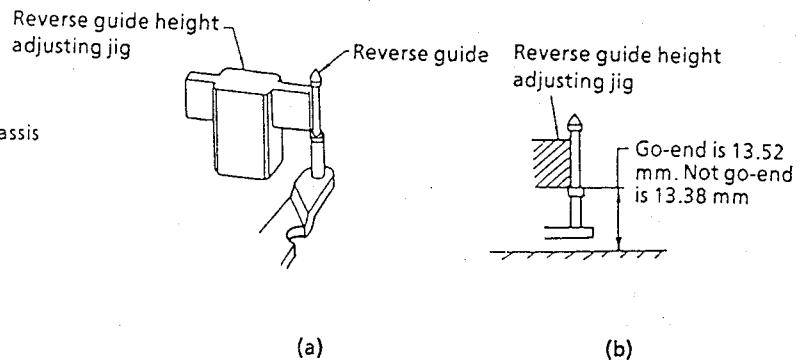

Figure 1-50.

[Height adjustment of reverse guide]

To readjust the height, remove the cut washer from behind, take out the spring, lift the reverse guide and add a washer.

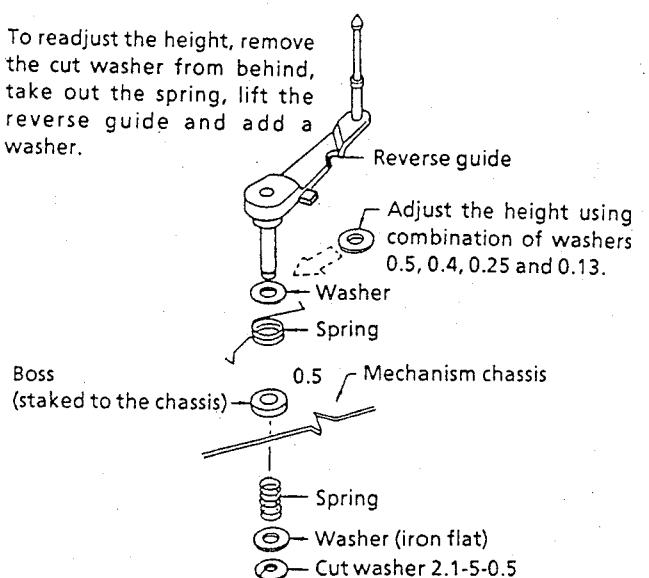

Figure 1-51.

HEIGHT ADJUSTMENT OF RETAINING GUIDE AND REVERSE GUIDE

Notes:

Before the rough adjustment of the tape drive train, check that the retaining guide height is within the value in Figure 1-50 by using the special jigs.

ADJUSTMENT OF TAPE DRIVE TRAIN

1. Remove the cassette housing control assembly.
2. Check and adjust the position of the tension pole. (See page 19.)
3. Check and adjust the video search rewind back tension. (See page 18.)
4. Set the tilt angle of the A/C head. (See page 22.)
5. Rough adjustment of tape drive train.
 - a) Connect the oscilloscope to the test point for PB CHROMA envelope output (TP2201). Set the synchronism of the oscilloscope to EXT. The PB CHROMA signal is to be triggered by the head switching pulse (TP2202).
 - b) Loosen the setscrew at the lower part of the guide roller, and adjust it with an adjusting screw driver (JIGDRIVERH-4) so that the guide roller turns smoothly. (Do not overloosen the setscrew, which causes insecurity of the guide roller.) (See Figure 1-52.)
 - c) Set the alignment tape (monoscope pattern) on the reel disk, and place the unit in the playback mode. (Place a 500 g. weight on the cassette tape to prevent floating of the cassette tape.)

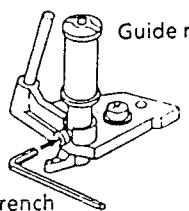

Figure 1-52.

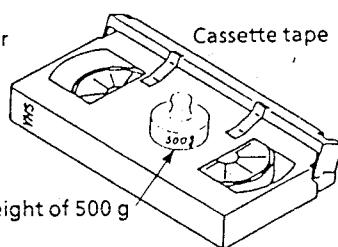

Figure 1-53.

- d) Change the envelope waveform from MAX to MIN, and MIN to MAX by pushing the (+) or (-) tracking button, and check a flat response is obtained on the waveform.
- e) If a flat response cannot be obtained, roughly adjust the guide rollers on the supply side and take-up side using an adjusting screw driver until a flat response can be obtained.
- f) Turn the A/C head tilt adjusting screw with a screwdriver to prevent the tape from wrinkling at the upper and lower flanges of the fixed guide.
 - 1) Wrinkles at the upper flange : Turn the above adjusting screw clockwise, as shown in Fig. 1-54 (a).
 - 2) Wrinkles at the lower flange : Turn the above adjusting screw counterclockwise, as shown in Fig. 1-54 (b).

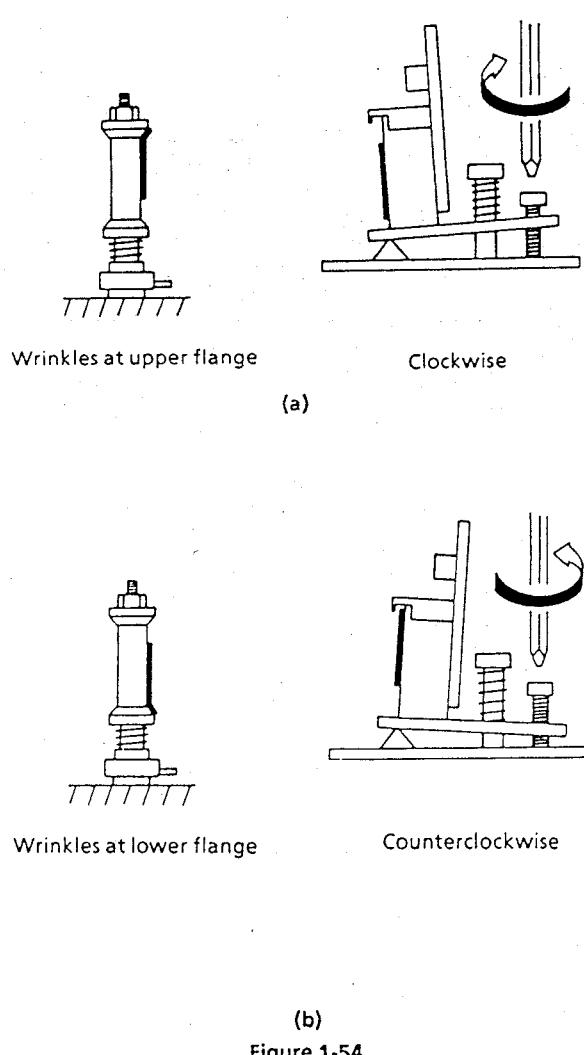

Figure 1-54.

Notes:

1. Place the tracking control in the center position, and adjust the X-position adjusting nut so that the PB CHROMA envelop becomes maximum for easier rough adjustment of the tape drive train.
2. In the rough adjustment, pay particular attention to the outlet side.

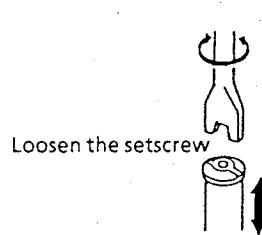

Figure 1-55.

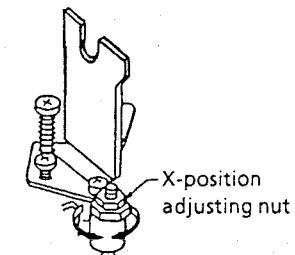

Figure 1-56.

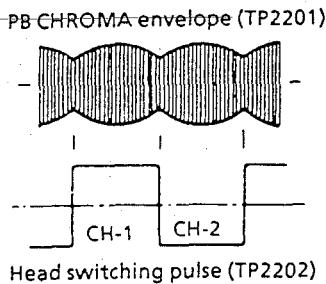

Figure 1-57.

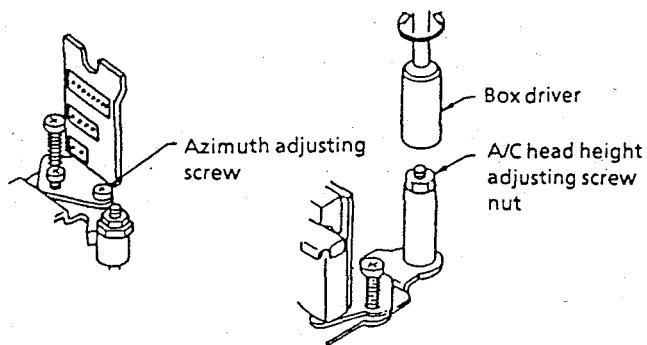

Figure 1-58.

Figure 1-59.

6. Adjustment of A/C head height and azimuth
 - a) Connect an oscilloscope to the audio output terminal.
 - b) Use the alignment tape and play back its audio 6 kHz signal (monoscope pattern for video signal). Adjust the azimuth adjusting screw to obtain the maximum audio output on an oscilloscope. (See Figure 1-58.)
 - c) Use the alignment tape and play back its audio 1 kHz signal (colour bar for video signal) and slowly rotate the A/C head height adjusting nut with the special box driver to obtain the maximum audio output.
 - d) Perform the adjustment in b) again.
 - e) After this adjustment, apply glyptal to the screws and nuts to fix them.

7. Adjustment of tape drive train and X-Position.
 - a) Connect the oscilloscope to the test points (TP2201) for PB CHROMA envelope output. Set the synchronism of the oscilloscope to EXT. The PB CHROMA signal is to be triggered by the head switching pulse (TP2202).
 - b) Play back the tape drive train alignment tape.
 - c) Push the (+) or (-) button to change the envelope waveform from MAX to MIN, and MIN to MAX. Adjust the guide roller's height on the supply and take-up sides with an adjusting screw driver, to obtain an envelop waveform that is as flat as possible.
 - d) If the tape is above or below the helical lead, the PB CHROMA waveform will take the shape shown in Figure 1-60.
 - e) Adjust for maximum flatness of the envelope as the step 5, e) in page 24.

	When the tape is above the helical lead.		When the tape is below the helical lead.	
	Supply side	Take-up side	Supply side	Take-up side
Adjustment	Supply side guide roller rotated in clockwise direction (lowers guide roller) to flatten envelope.	Take-up side guide roller rotated in clockwise direction (lowers guide roller) to flatten envelope.	Supply side guide roller rotated in counterclockwise direction (raises guide roller) to make the tape float above the helical lead. The supply side guide roller is then rotated in the clockwise direction to flatten the envelope.	Take-up side guide roller rotated in counterclockwise direction (raises guide roller) to make the tape float above the helical lead. The take-up side guide roller is then rotated in the clockwise direction to flatten the envelope.

Figure 1-60.

- f) Push the (+) or (-) tracking button to check that a flat response is obtained on the envelope waveform.
- g) Secure the guide roller by tightening the guide roller setscrew in the unloading mode.
- h) Play back the tape drive train alignment tape to check that the envelope waveform does not change.
- 8. Adjustment of A/C head X-position.
 - a) Push the (+) and (-) tracking buttons at the same time to the preset mode.
 - b) Rotate the X-position adjusting nut with an adjusting box driver, and adjust the A/C head position for maximum head switching pulse low side envelope.
 - c) Adjust the playback switching point.
 - d) Check the flatness of the envelope waveform and sound by playing back a recorded tape.

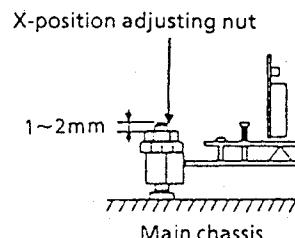

Figure 1-61.

REPLACEMENT OF THE CAPSTAN D.D. (DIRECT DRIVE) MOTOR

- Remove the cassette housing control assembly.
- Removal (Follow the order of indicated numbers.)
 - Remove the three screws.

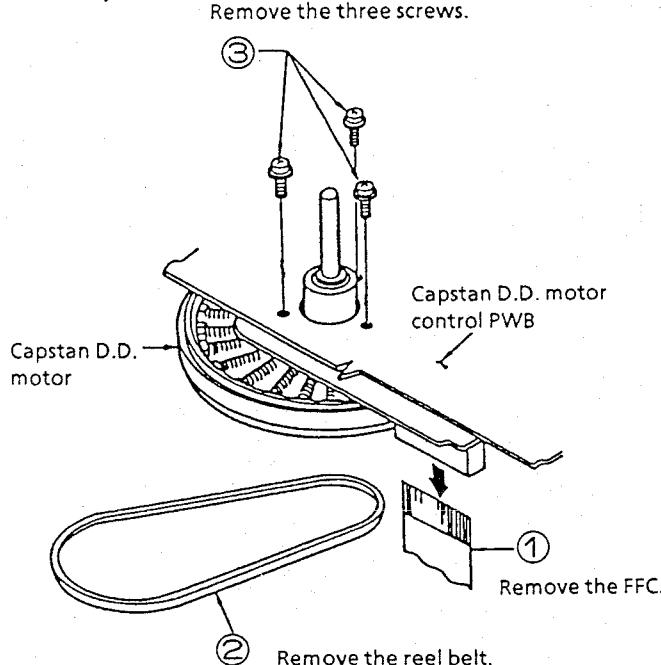

Figure 1-62.

● Reassembly

1. Mount the capstan motor on the mechanism chassis making sure not to allow the capstan shaft to hit the mechanism chassis, and attach it with the three screws.
2. Insert the FFC into the capstan D.D. motor control PWB.
3. Attach the reel belt.

Notes:

1. After installing the capstan D.D. motor, be sure to rotate the capstan D.D. motor and check the movement.
2. Check and adjust the servo circuit.

REMOVAL AND REASSEMBLY OF THE LOADING GEAR BLOCK

1. Remove the cassette housing control assembly.
2. Remove the reel belt.
3. Remove the reel block.

● Removal

Notes:

1. Use care not to deform the parts hooked to the take-up loading gear and supply loading gear as shown in Figure 1-63.

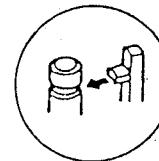

Figure 1-63.

2. In removing the loading gear, secure the guide roller with a rubber band or the like beforehand for easier reassembly.

Remove the E ring.

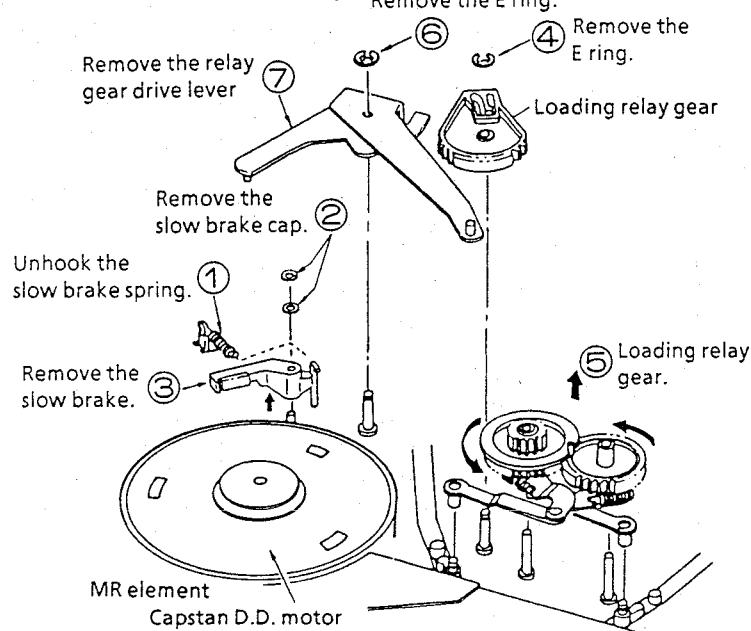

Figure 1-64.

1. Remove the slow brake spring ①.
2. Remove the cut washers ②.
3. Remove the slow brake lever ③.
4. Remove the E ring ④.
5. Rotate the take-up loading gear, take-up loading arm assembly, supply loading gear and supply loading arm assembly slightly in the loading direction, and take them ⑤ all out.
6. Remove the E ring ⑥.
7. Remove the relay gear drive lever ⑦.

• **Reassembly**

Reverse the procedure. Be sure to match the tally marks on the gears.

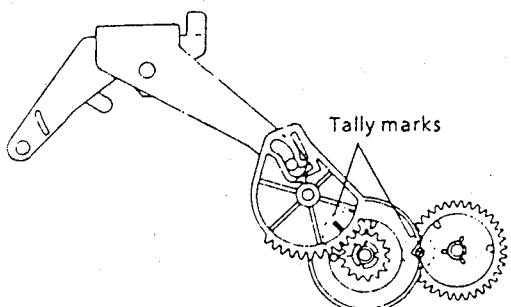

Figure 1-65.

Notes :

1. When reassembling, apply specified grease to the following points; all the gear teeth, all the gear shafts and the cam groove of loading relay gear.
2. Be careful not to deform the supply/take-up loading arms.
3. Be careful to keep clean the slow brake lever felt.
4. Be also careful to keep the outer surface of the capstan D.D. motor free from dust and dirt. (If stained, the MR (Magnet Resistor) element might be damaged.)
5. Take care not to deform the anti-fall hooks of the slow brake lever and supply/take-up loading gears more than required.

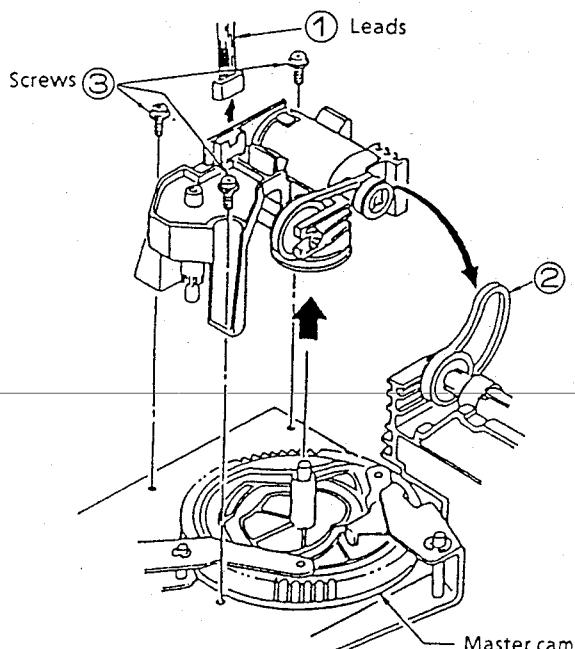

Figure 1-66.

Notes:

When using a magnetic screw driver in removal of three screws, do not allow the magnetic driver to hit the A/C head or drums.

• **Reassembly**

1. Turn the master cam all the way counter-clockwise.
2. Match the tally mark on the cam switch with the mating mark. Fit the loading block and the master cam with each other. Tighten up the three screws.

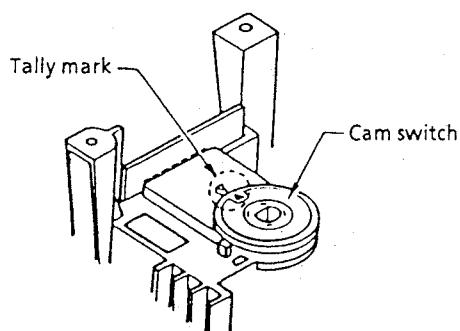

Figure 1-67.

3. Finally connect the leads and apply the cassette loading belt.

Notes:

1. Be careful not to scratch the gear.
2. Be careful not to stain the belt. If dirty, clean it up with the specified cleaning liquid.

REPLACEMENT OF LOADING MOTOR

1. Set the cassette ejected condition by placing the unit in the cassette eject mode.
2. Unplug the power cord.
3. Remove the loading block in accordance with the statements and drawings above.

- Removal

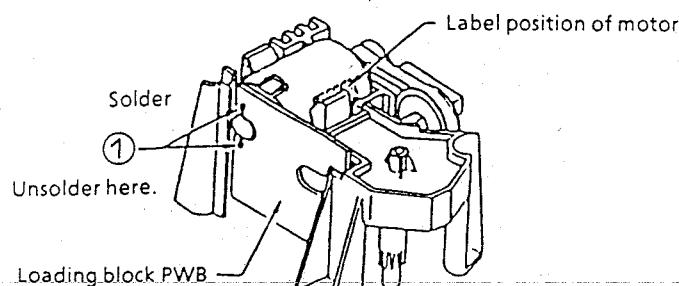

Figure 1-68.

1. Unsolder the leads ① from the loading motor.
2. Unlock the left and right catches ② of the cam switch off the loading block. Take out the cam switch and loading block PWB (See Figure 1-69).

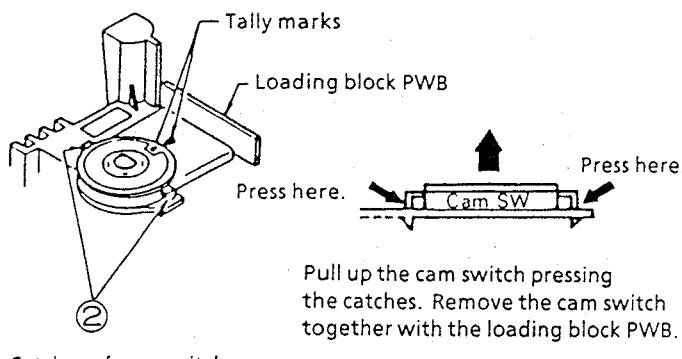

Figure 1-69.

3. Take out the loading belt ③.
4. Pry up the back end of the loading motor with a screw driver or the like as in Figure 1-70 and take out the motor.

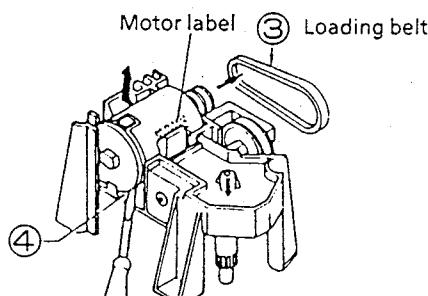

Figure 1-70.

- Reassembly

1. Remove the loading motor, and mount a new loading motor as in Figure 1-71.
2. Place the loading motor so that its label is visible as shown in Figure 1-71. Make sure that the screw hole at the motor shaft, protuberance on the loading block, and the motor's back end marked with the arrow are mated with each other.

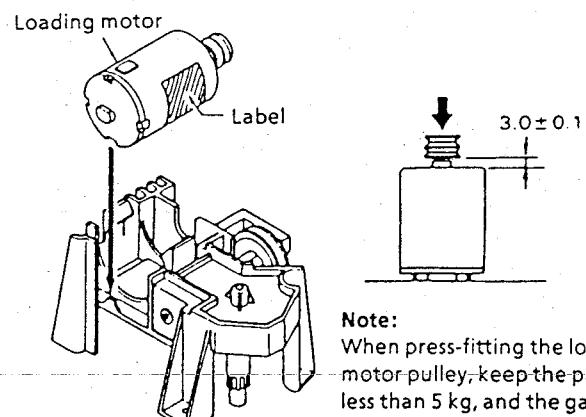

Figure 1-71.

Note:
When press-fitting the loading motor pulley, keep the pressure less than 5 kg, and the gap between the motor and pulley should be 3.0 ± 0.1 mm.

Figure 1-72.

3. Set the loading block PWB and the cam switch in position.
4. Resolder the leads to the loading motor.
5. Finally place the loading block (See page 27).
6. Attach the loading belt.

REPLACEMENT OF MASTER CAM

- Removal

1. Remove the E ring ①.
2. Remove the half-loading drive lever ②.
3. Remove the E ring ③.
4. Remove the pinch roller lever ④.
5. Pull out the master cam ⑤ upward.

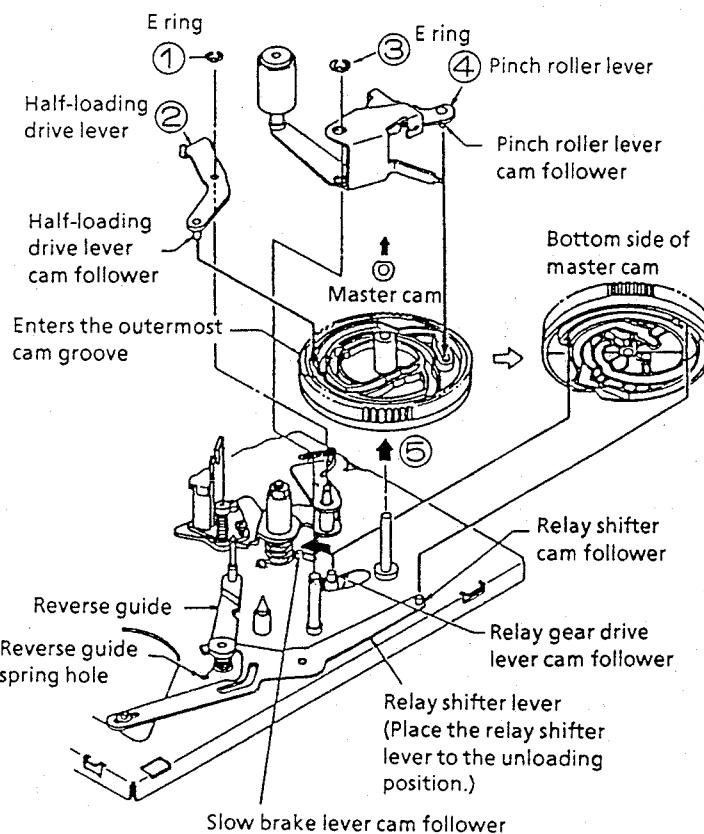

Figure 1-73.

- Reassembly

1. Place the relay gear drive lever in the unloading state.
2. Place the relay shifter so that it is in contact with the reverse guide spring hole in the mechanism chassis. Release the slow brake lever with a finger to bring it away from the capstan (in the direction of arrow). Then place the master cam so that the D cut-off part of the master cam faces the direction of arrow.
3. Place the half-loading recipro lever's cam follower so that it fits in the master cam's circumferential cam groove (marked with arrow), attach the E ring, then mount the half-loading recipro lever.
4. Turn the master cam somewhat clockwise until the pinch roller lever's cam follower goes into the master cam's groove (marked with arrow). Mount the pinch roller lever and then attach the E ring.
5. Rotate the master cam by hand to make sure all the four levers (relay gear drive lever, half-loading recipro lever, pinch roller lever, and relay shifter lever) are in the cam grooves in place.
6. Mount the loading block. (See page 27.)

Notes:

1. Be careful not to scratch the teeth and grooves of the master cam.
2. After installation of the master cam, be sure to rotate the master cam by hand before installing the loading block. If the levers are in wrong position, the master cam and the levers may get damaged when the motor starts.
3. Apply specified grease to the master cam's grooves and teeth.

REPLACEMENT OF UPPER DRUM

Notes:

The gap between the lower drum and the upper drum is very accurate, in the order of microns, and care should be paid to their replacement. Even a slight amount of foreign material will affect the accuracy of their reassembly.

- Replacement (Follow the order of the indicated numbers.)

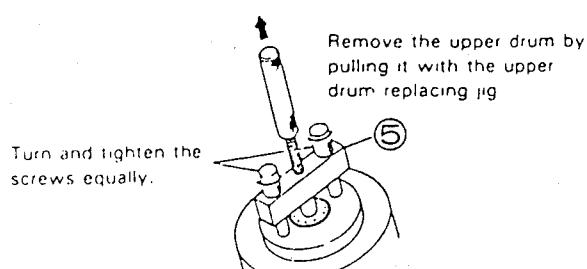

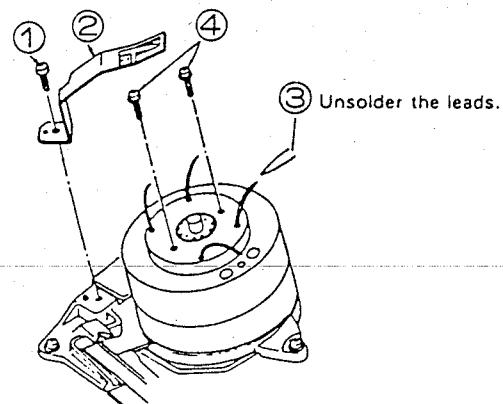

Figure 1-74.

Notes:

1. Avoid touching the drum surface with bare hands.
2. Pull out the upper drum with care so that it may not be tilted, and replace it with the upper drum replacing jig using care not to damage the disk circumference.
3. Do not hit the screws when tightening them.

- Reassembly

Notes:

1. Before setting the drum, check that there are no scratches or dust on the edge of the surface and circumference of the disk.
2. Before setting the drum, check that there are no scratches or dust on the internal surface and edge of the surface of the upper drum.
3. On assembling these parts, insert the upper drum onto the disk with care, so that the upper drum is not tilted.
4. When assembling these parts, do not allow dust or dirt come between the disk and the upper drum.
5. Do not use excessive force when driving in the screws.

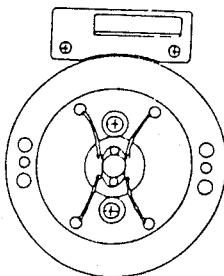

Figure 1-75.

1. Set the new drum.
2. Fasten the upper drum in place with the two screws.
3. Solder the leads.

Note:

Soldering should be performed quickly and carefully without touching adjacent patterns.

4. After replacement, be sure to check the tape drive train adjustment (see page 24.) and the following electric adjustments.
- Adjustment of the playback switching point.
- Checking and adjustment of the X-position.

REPLACEMENT OF D.D. MOTOR

1. Put the unit in the cassette eject position.
2. Unplug the power cord.

• Removal (Reverse the order in reassembly.)

1. Remove the FFC ①.
2. Remove the two D.D. rotor assembly setscrews ②.
3. Pull out the D.D. rotor ass'y ③.
4. Remove the three D.D. stator setscrews ④.
5. Remove the D.D. stator assembly ⑤.

Notes:

1. When removing the D.D. rotor assembly or D.D. stator assembly, use care not to hit the loading relay gear.
2. Secure the D.D. rotor assembly so that the installation positioning holes in the D.D. rotor assembly and lower drum assembly match.
3. Be careful not to damage the upper drum or the video head.
4. Be sure that the hall device and the D.D. stator assembly are not damaged by the D.D. rotor assembly or other parts.
5. After installation, adjust the playback switching point.

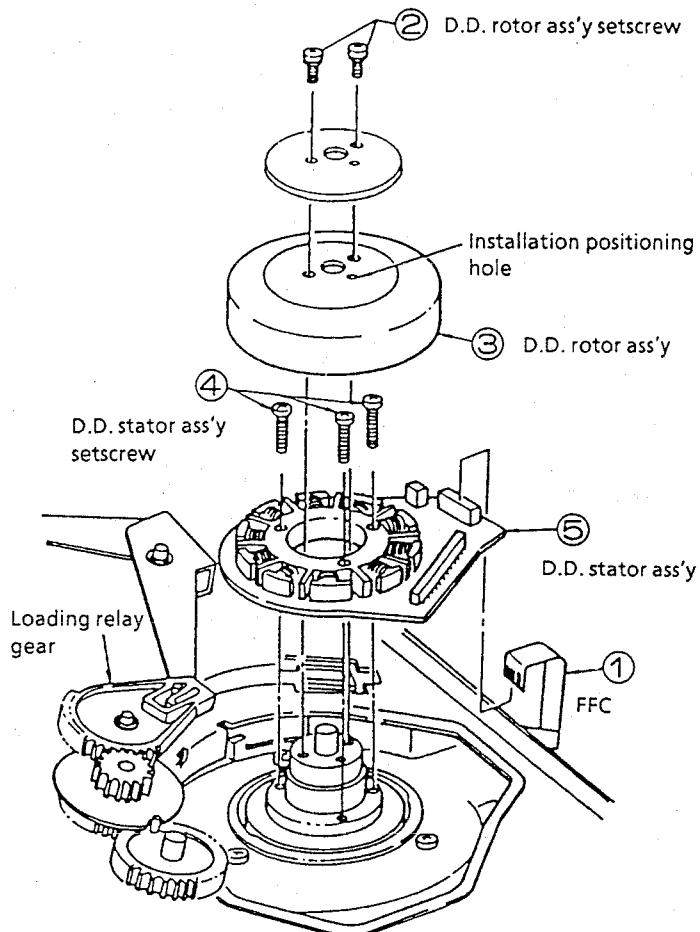

Figure 1-76.

REPLACING THE AHC (AUTOMATIC HEAD CLEANER)

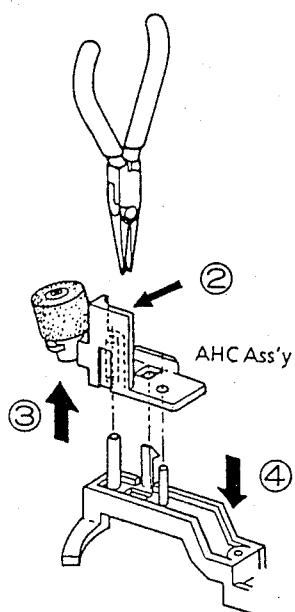

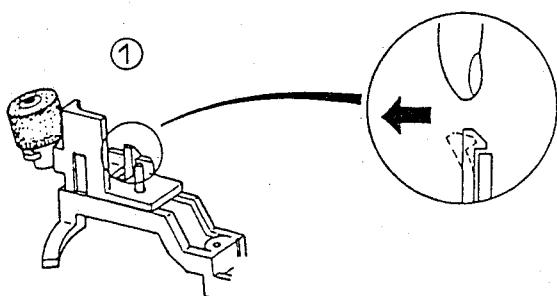

Figure 1-77.

● Removal

Unhook part ① with a finger in the direction of arrow.

Hold the rib (marked with an arrow) of the AHC ass'y ② with electrician's pliers or the like, and pull the ass'y upward in the direction of arrow ③.

Note:

To pull out the AHC ass'y, hold the AHC lever down.

● Reassembly

Push down the AHC ass'y in the direction of arrow ④.

Make sure that the ass'y is secured in position by the hook of part ①.

Notes:

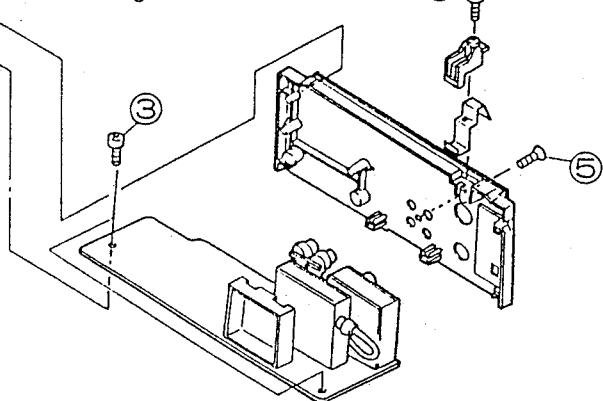

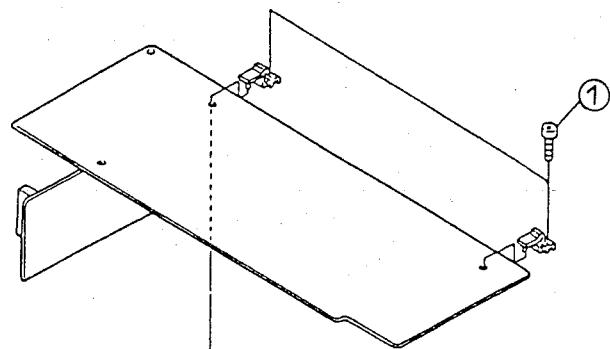

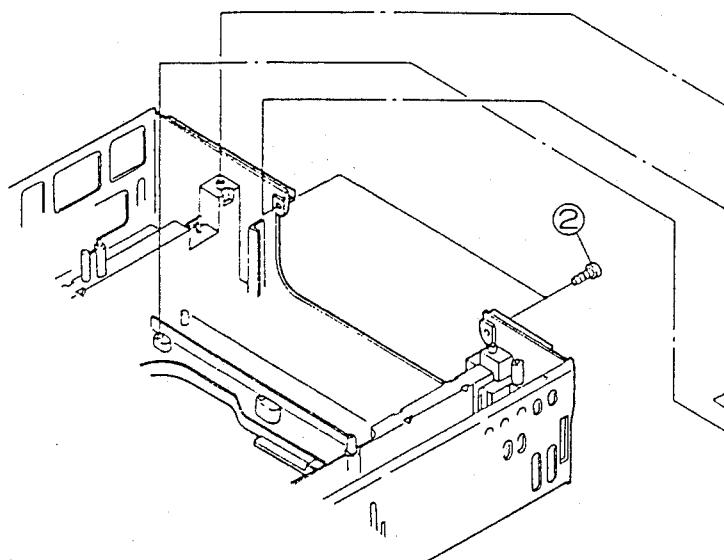

1. Be careful to keep the AHC ass'y out of contact with the drum.
2. Be careful to keep the cleaner section of the ass'y free of grease or contaminants.

ADJUSTMENT OF THE ELECTRICAL CIRCUITRY

■ DISASSEMBLY OF IF/TUNER AND POWER UNITS

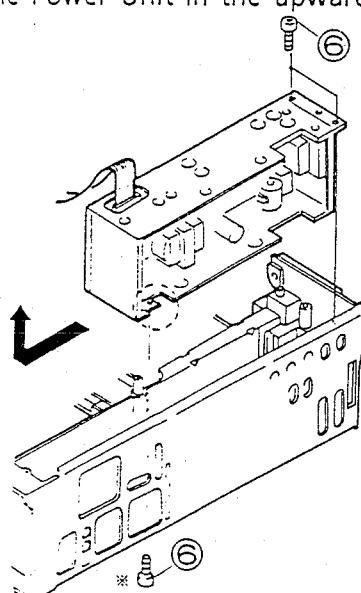

IF/Tuner Unit

1. Remove two screws ① which fasten the Main PWB.
2. Remove two screws ②.
3. Remove the two screws ③ and take out in the upward direction the Antenna Terminal Plate with the IF/Tuner Unit.
4. Remove the screw ④ from the RF converter holder.
5. Remove the screw ⑤ to remove the IF/Tuner Unit from the Antenna Terminal Plate.

Power Unit

1. Remove three screws ⑥ which fasten the Power Unit.
2. Slide the Power Unit in the direction of the arrow to uncouple it from the main frame, and remove the Power Unit in the upward direction.

Note:

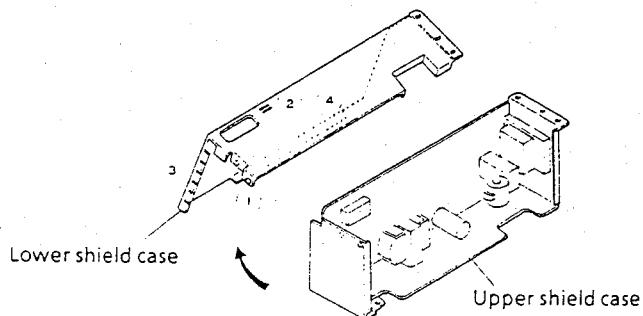

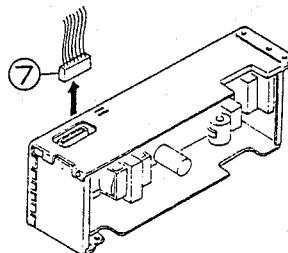

The screw marked (※) is used to tighten up the bottom plate.

Power Unit Shield Case

1. Remove the wire lead with Connector PA ⑦.
2. Hold the Upper Shield Case down and remove the Lower one by turning it in the direction of the arrow.

Note:

For easier coupling, fit at locations (1) to (4) in this order.

Prior to the adjustment:

In most cases, necessity for electrical circuits will arise from replacement of mechanical parts including the video head. Before starting adjustment of electrical circuits, check that mechanical operation of the equipment is complete (the mechanism are adjusted completely).

If the equipment fails electrically, locate a defect or defects first of all using instruments. Then repair or replace parts and make adjustment by the procedures described below.

When required instruments are not available, do not move controls indiscriminately.

• Instruments

- Colour monitor TV
- DC regulated power supply
- VTVM
- Oscilloscope
- Audio generator
- Connector (QCNW-6443GEZZ)
- Colour bar generator
- Alignment tape
- Frequency counter
- Blank video tape(VHS)

■ ADJUSTMENT OF POWER CIRCUIT**Adjustment of power circuit (UR6.5V)**

Measuring instrument	Voltmeter
Mode	Recording (SP mode)
Test point	Pin 4 of AP connector located on the Main PWB.
Control	R928
Adjusting point	$6.6 \pm 0.1 V$

1. Remove the AC cord.
2. Remove the three power unit fastening screws.
Lift up the power unit from front side and move it toward \leftarrow direction.
3. Connect the AC cord and power supply.
4. Connect the voltmeter to Pin 4 of AP connector and Ground.
(AP connector located on the MAIN PWB.)
5. Set the unit in the recording mode.
Adjust R928 so that the voltmeter reads $6.6 \pm 0.1 V$.

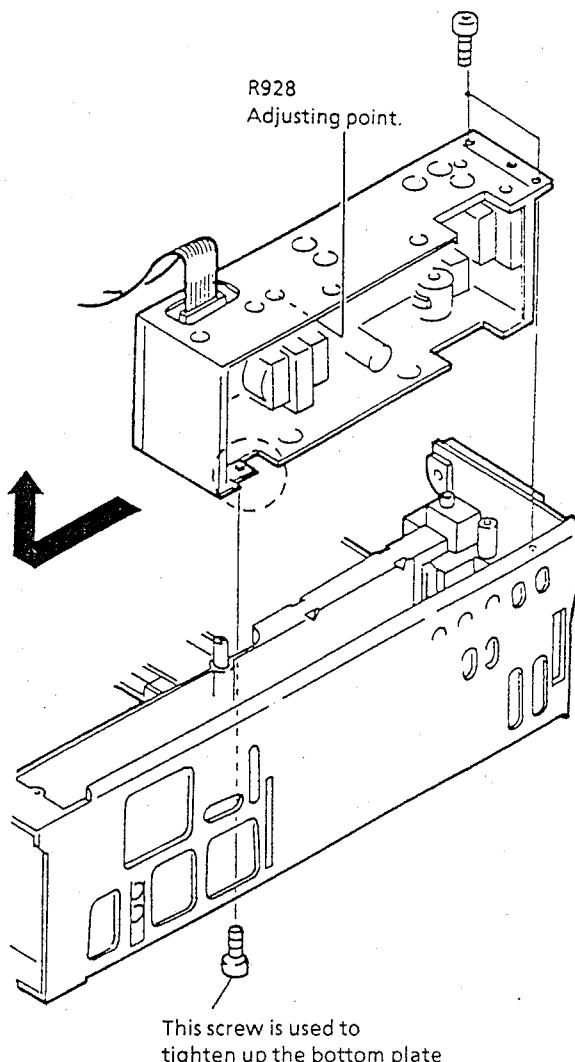

Figure 2-1. POWER

ADJUSTMENT OF SYSTEM CONTROL/SERVO CIRCUIT

• Test points layout

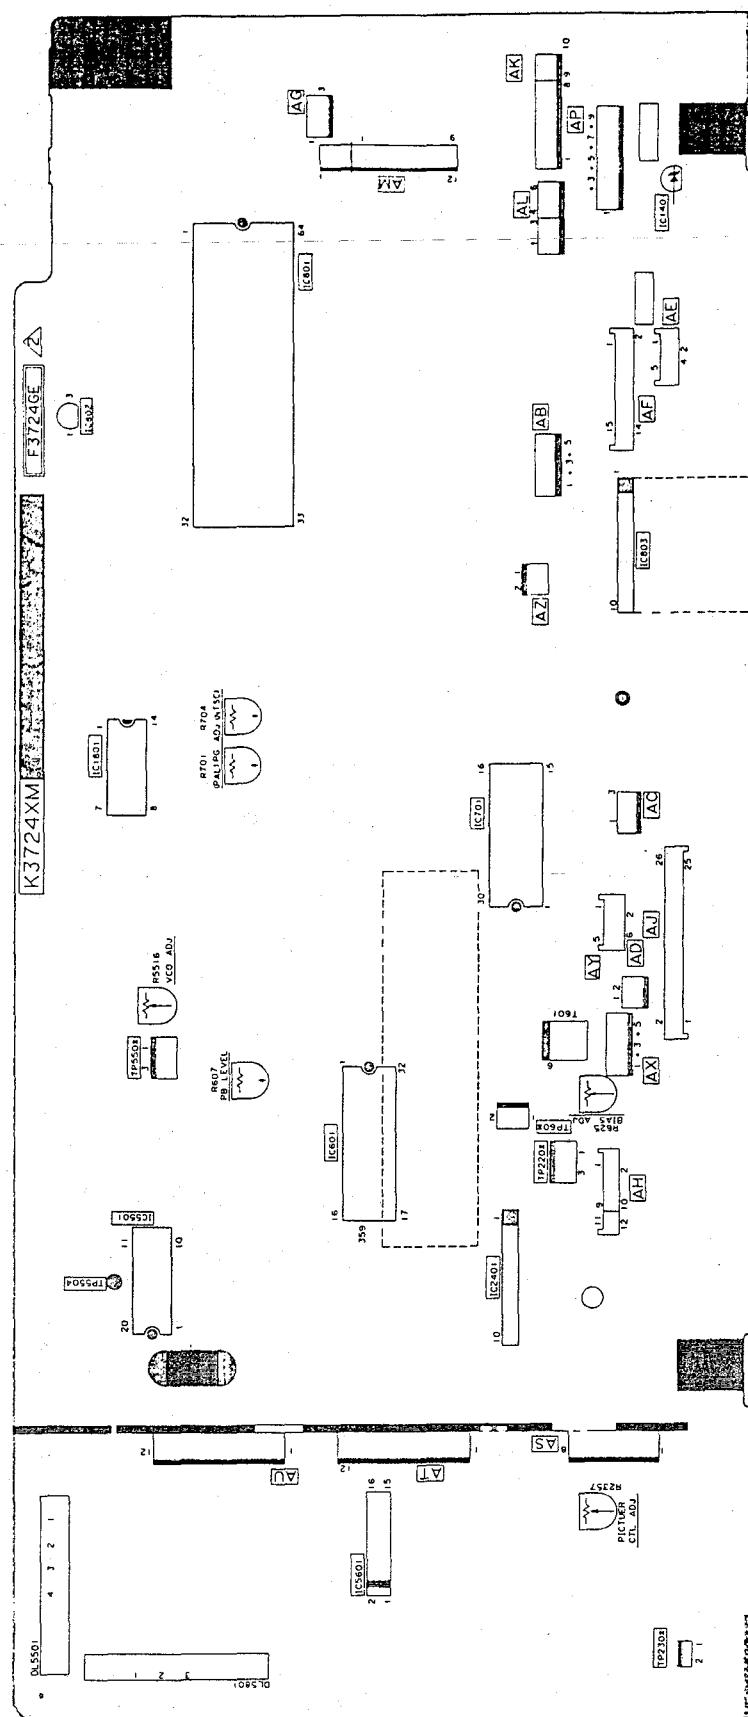

Figure 2-2. MAIN PWB

■ ADJUSTMENT OF SERVO CIRCUIT (PAL)

Adjustment of PAL system playback switching point.

Measuring instrument	Oscilloscope
Mode	Playback (Tracking at center)
Tape used	Alignment tape (VROCPGV)
Test point	CH-1; TP2202 CH-2; Video output terminal (CH-1 trigger slope switch at (+), Internal trigger at CH-1 side)
Control	R701 (Phase generator M.M.)
Specification	6.5 ± 0.5H

1. Insert the PAL system alignment tape (VROCPGV) and put the unit in the playback mode.
2. Press the unit to tracking in the center mode.
(See note below.)
3. Adjust R701 (phase generator M.M.) so that the waveform on the oscilloscope screen be as shown Figure 2-3.

Note:

How to tracking in the center mode.

1. Remove the cassette housing.
2. Press the test button on the located on the timer PWB.

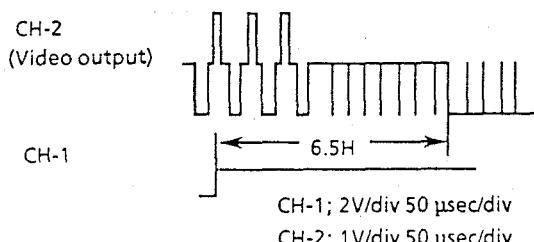

Figure 2-3.

Adjustment of PAL system SP slow tracking

Measuring instrument	Monitor TV
Mode	Recording and playback on self-recording tape.
Input signal	Commercial broadcast or video signal. (External input selector switch)
Test Point	Monitor screen
Adjusting point	Tracking control button (+) or (-)
Specification	No noise bar on the monitor TV screen.

1. Play back the self-recording tape in the PAL system SP mode.
2. Press the test button so that the test mode.
3. Be sure that all the fluorescent display tubes light up.
4. Press the slow button and playback the recorded portion in the slow mode.
5. Adjust the tracking control using the tracking button on the main unit or the remote controller so that there is no noise on the screen.
6. Press the stop button in the slow tracking preset data are memorized.
7. Press the all clear button in the return to normal mode.

Adjustment of still picture vertical sync.

Measuring instrument	Monitor TV
Mode	Still picture playback
Input signal	Self-recording tape
Test point	Monitor screen
Adjusting point	Tracking control button (+) or (-)
Specification	No noise jitter

1. Play back the self-recording tape in the PAL system SP mode.
2. Press the test button so that the test mode.
3. Be sure that all the fluorescent display tubes light up.
4. Press the still button and playback the recorded portion in the SP mode.
5. Adjust the tracking control using the tracking button on the main unit or the remote controller, make adjustment so that jitter becomes minimum.
6. Press the stop button in the still preset data are memorized.
7. Press the all clear button in the return to normal mode.

■ ADJUSTMENT OF SERVO CIRCUIT (NTSC)

Adjustment of NTSC system playback switching point

Measuring instrument	Oscilloscope
Mode	Playback (Tracking at center)
Tape used	Alignment tape (VROATSV)
Test point	CH-1; TP2202 CH-2; Video output terminal (CH-1 trigger slope switch at (+), Internal trigger at CH-1 side)
Control	R704 (Phase generator M.M.)
Specification	6.5 ± 0.5H

1. Insert the NTSC system alignment tape (VROATSV) and put the unit in the playback mode.
2. Press the unit to tracking in the center mode. (See note below.)
3. Adjust R704 (phase generator M.M.) so that the waveform on the oscilloscope screen be as shown Figure 2-4.

Note:

How to tracking in the center mode.

1. Remove the cassette housing.
2. Press the test button on the located on the timer PWB.

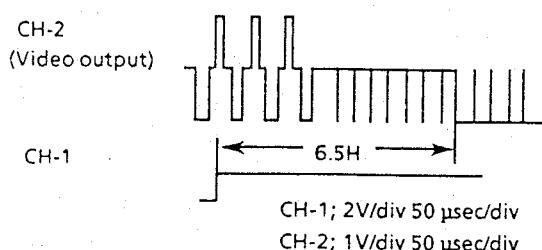

Figure 2-4.

Adjustment of NTSC system SP slow tracking

Measuring instrument	Monitor TV
Mode	Playback (SP mode playback)
Tape used	Alignment tape (VRONBZZS)
Test Point	Monitor screen
Adjusting point	Tracking control button (+) or (-)
Specification	No noise bar on the monitor TV screen

1. Insert the NTSC system alignment tape (VRONBZZS) and put the unit in the SP portion playback mode.
2. Press the test button so that the test mode.
3. Be sure that all the fluorescent display tubes light up.
4. Press the slow button and playback the SP portion in the slow mode.
5. Adjust the tracking control using the tracking button on the main unit or the remote controller so that there is no noise on the screen.
6. Press the stop button in the slow tracking preset data are memorized.
7. Press the all clear button in the return to normal mode.

Adjustment of still picture vertical sync.

Measuring instrument	Monitor TV
Mode	Still picture playback
Tape used	Alignment tape (VRONBZZS)
Test point	Monitor screen
Adjusting point	Tracking control button (+) or (-)
Specification	No noise jitter

1. Insert the NTSC system alignment tape (VRONBZZS) and put the unit in the SP portion playback mode.
2. Press the test button so that the test mode.
3. Be sure that all the fluorescent display tubes light up.
4. Press the still button and playback the SP portion in the still mode.
5. Adjust the tracking control using the tracking button on the main unit or the remote controller, make adjustment so that jitter becomes minimum.
6. Press the stop button in the still preset data are memorized.
7. Press the all clear button in the return to normal mode.

■ ADJUSTMENT OF Y/C CIRCUIT

- Test point layout

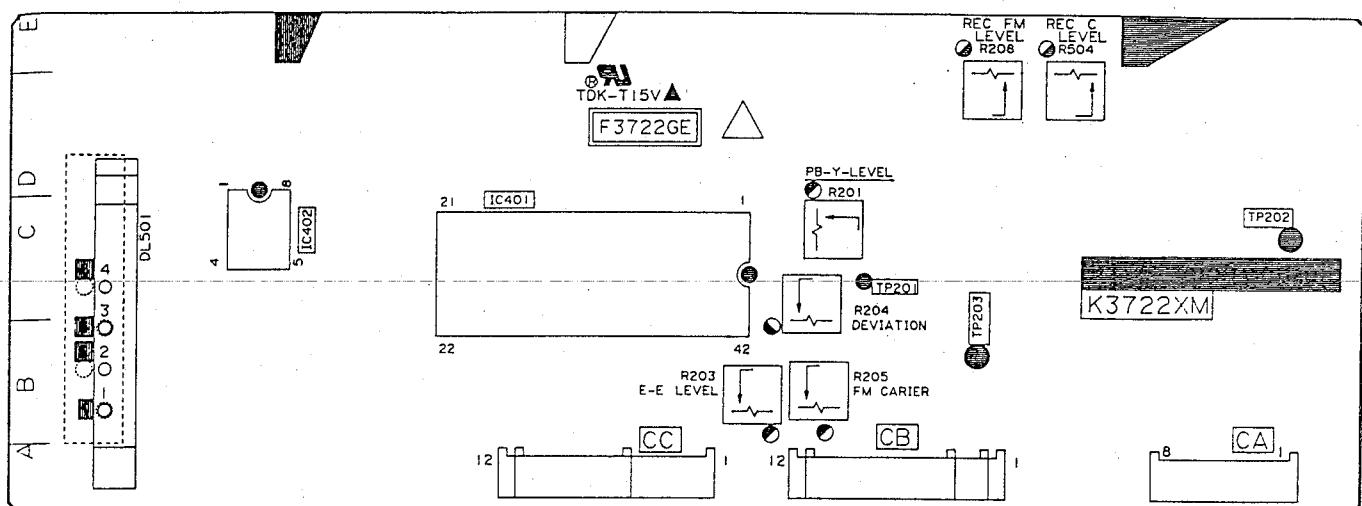

Figure 2-5. Y/C PWB

Adjustment of EE level

Measuring instrument	Oscilloscope
Mode	EE or Record
Input signal	Standard colour bar (stair-case waveform)
Test point	Video output terminal
Adjusting point	R203 (EE level control)
Specification	$1.0 \pm 0.06 \text{ Vp-p}$

1. Connect a 75 ohm resistor to the video output terminal and hook the oscilloscope across this resistor. (See note below.)
2. Feed the colour bar signal to the video input terminal in the EE or recording mode.
3. Adjust R203 so that the signal amplitude is 1.0 Vp-p as shown in Figure 2-6.

Note:

If the terminating resistor is missing, the signal amplitude will be doubled.

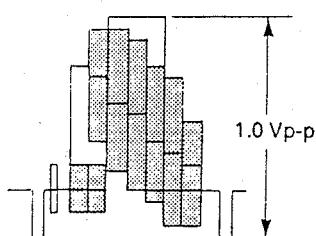

Figure 2-6.

Adjustment of playback video signal level

Measuring instrument	Oscilloscope
Mode	Playback
Tape used	Alignment tape (VROCPGV)
Test point	Video output terminal
Adjusting point	R201 (Playback Y-level control)
Specification	$1.0 \pm 0.06 \text{ Vp-p}$

1. Connect a 75 ohm resistor to the video output terminal and connect an oscilloscope across this resistor. (See note below.)
2. Play the colour bar portion of the alignment tape and adjust R201 so that the signal amplitude is measured 1.0 Vp-p on the oscilloscope as shown in Figure 2-7.

Note:

If the terminating resistor is missing, the signal amplitude will be doubled.

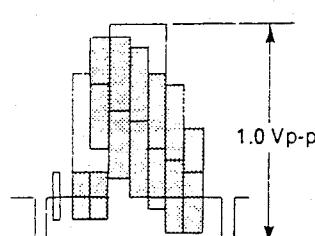

Figure 2-7.

Adjustment of FM carrier and deviation

Measuring instrument	Frequency counter, Oscilloscope
Mode	Record/Playback (SP mode)
Input signal	Standard colour bar (stair-case waveform)
Test point	TP301 (GND at TP302) Video output terminal
Adjusting point	R205 (FM carrier control) R204 (Deviation control)
Specification	3.8 ± 0.05 MHz 1.0 ± 0.04 Vp-p

1. Make sure that R203 (E-E level) and R201 (playback Y-Level) have been correctly adjusted.
2. Connect a 75 ohm terminating resistor to the video output terminal and connect an oscilloscope across this resistor.
3. Connect a frequency counter to TP301 and TP302.
4. Place the unit in record mode and get it ready for external input with no signal. (Disconnect any cable from video input terminal.)
5. Adjust R205 so that the frequency counter reading be 3.8 MHz.
6. Feed the standard colour bar signal (stair-case waveform) and make self-recording and playback.
7. Observe the video output terminal voltage (across the terminal resistor) on the oscilloscope screen. If the playback video signal level is above 1.0 Vp-p, turn R204 clockwise. If below 1.0 Vp-p, turn the control counter clockwise. Now make self-recording and playback again.
8. Repeat the above step (7) to finally get the playback video signal level at 1.0 ± 0.04 Vp-p, as shown in Figure 2-8.

Note:

1. Carry out this adjustment only when IC401 has been replaced or when the carrier setting (3.8 MHz) or the deviation is found apparently out of specification
2. If the terminating resistor is missing, the signal amplitude will be doubled.

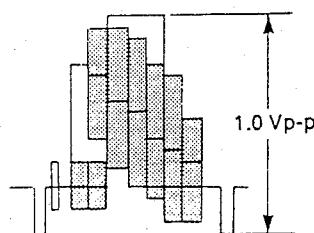

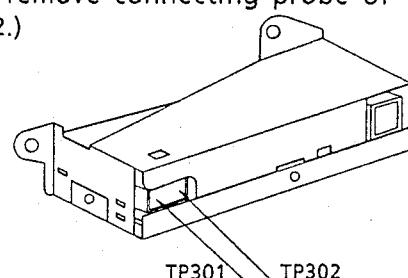

Figure 2-8.

Adjustment of recording current

Measuring instrument	Oscilloscope
Mode	Record
Input signal	Standard colour bar (stair-case waveform)
Test point	TP301, TP302 (GND) [External trigger: Video output terminal]
Adjusting point	R504 (Record Chroma Level Control) R208 (Record FM level control)
Specification	30 ± 2 mVp-p (Chroma) 130 ± 10 mVp-p (FM-Y)

1. Feed the standard colour bar signal (stair-case waveform) to the video input terminal.
2. Connect the oscilloscope's GND and SIG leads to TP302 and TP301, respectively.
(for convenient connection of the oscilloscope, use QCNW-6443GEZZ.)
3. Set the unit in the recording mode.
4. Turn R208 to minimize the FM luminance signal.
5. Adjust R504 so that the amplitude of red portion is 30 ± 2 mVp-p as shown in Figure 2-9.
6. Adjust R208 so that the amplitude of sync tip portion is 130 ± 10 mVp-p as shown in Figure 2-10.
7. Remove QCNW-6443GEZZ after adjustment.
(Also remove connecting probe of TP301 and TP302.)

Note:

TP301 and TP302 are located on the head amp module.

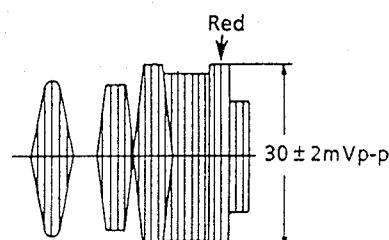

Figure 2-9.

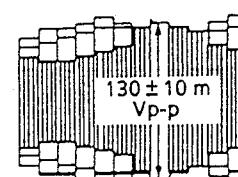

Figure 2-10.

■ ADJUSTMENT OF NTSC → PAL SIMPLE CONVERSION CIRCUIT

■ ADJUSTMENT OF AUTO PICTURE CONTROL CIRUCIT

- Test points layout

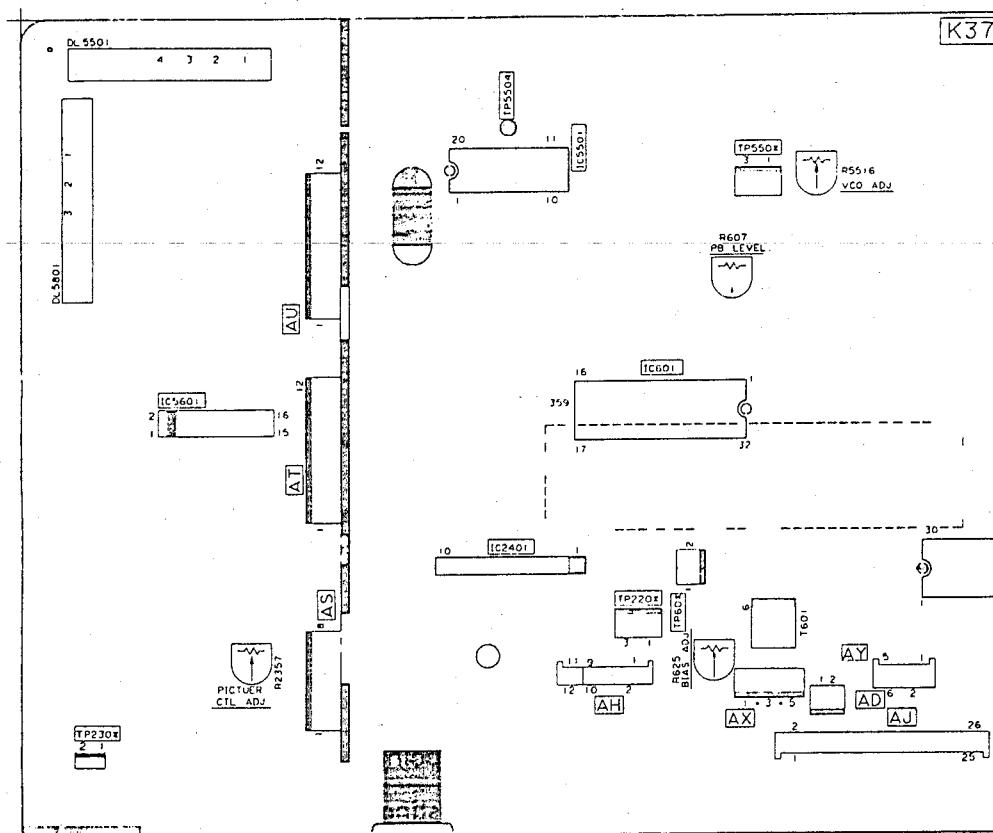

Figure 2-11. MAIN PWB

Adjustment of VCO free-run frequency

Measuring instrument	Frequency counter
Mode	Playback
Tape used	Alignment tape (VROATSV)
Test point	TP5502 (SIG) TP5501 (GND)
Control	R5516 (VCO control)
Specification	15735 ± 20 Hz

1. Play back the alignment tape (VROATSV). Set the colour mode switch to "AUTO" or "NT" position.
2. Make a short-circuit between TP5504 (pin 15 of IC5501) and TP5503 (PC5V) using a lead with clip.
3. Connect a frequency counter to TP5502. Adjust R5516 so that the counter reads the value below.
Specification: 15735 ± 20 Hz
(A free-run state is brought in the step 2 above, however A pull-in of ± 30 Hz or so is still caused.)
4. Disconnect the clip-fitted lead and make sure that the image is reproduced in colours in the PAL mode. (With a PAL CTV or a multi-system CTV in the PAL mode)

Adjustment of auto picture control

Measuring instrument	Digital volt meter
Mode	Recording and playback on self-recording tape.
Input signal	Standard colour bar (stair-case waveform)
Test point	TP2301 (SIG), TP2302 (GND)
Adjusting point	R2357 (Picture control)
Specification	2.4 ± 0.1 V

1. Play back the tape self-recorded. (Colour bar signal.)
2. Set the auto picture switch to "ON" or "AUTO PICTURE" position and picture tone volume in center.
3. Connect the digital volt meter to TP2301 (SIG) and TP2302 (GND). Adjust R2357 so that the digital volt meter reads 2.4 ± 0.1 V.

■ ADJUSTMENT OF AUDIO CIRCUIT

• Test point layout

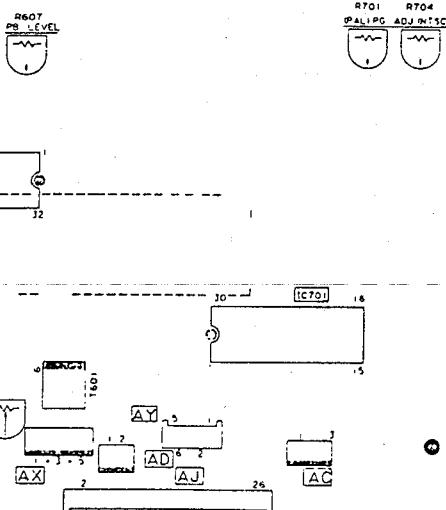

Figure 2-12. MAIN PWB

Adjustment of playback level

Measuring instrument	VTVM
Mode	Playback
Input signal	Alignment tape (VROCPSV) (1kHz level control signal)
Test point	Audio output terminal
Adjusting point	R607 (Playback level control)
Specification	-9 ± 1 dBs

1. Play back the alignment tape (1kHz level control signal).
2. Hook up the VTVM to the audio output terminal.
3. Adjust R607 (playback level control) so that the output level be -9 ± 1 dBs.

Checking of erase voltage and oscillation frequency

Measuring instrument	Oscilloscope
Mode	Recording
Input signal	_____
Test point	Both ends of the full-erase head
Adjusting point	_____
Specification	Erase voltage; Over 40 Vp-p Oscillation frequency; 70 ± 5 kHz

1. Place the unit to the record mode.
2. Hook up the oscilloscope to both ends of the full-erase head.
3. Make sure the erase voltage is over 40 Vp-p.
4. Be sure that the oscillation frequency is 70 ± 5 kHz.

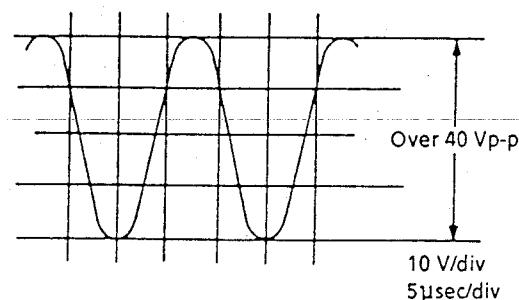

Figure 2-13.

Adjustment of bias current

Measuring instrument	VTVM
Mode	Recording
Input signal	_____
Test point	TP601 (SIG), TP602 (GND)
Adjusting point	R625 (Bias current control)
Specification	$280 \pm 10 \mu\text{A}$

1. Place the unit to the record mode.
2. Connect the VTVM to TP601 (SIG) and TP602 (GND).
3. Adjust R625 (bias current control) so that the bias current be $280 \pm 10 \mu\text{A}$ ($2.8 \pm 0.1 \text{mV}$).

Checking of recording level

Measuring instrument	VTVM
Mode	Self-recording/playback
Input signal	1 kHz / -8 dBs
Test point	Audio output terminal
Adjusting point	_____
Specification	1 kHz -8 ± 3 dBs

1. Feed 1 kHz, -8 dBs signal to the audio input terminal. Make self-recording and playback of the signal.
2. Make sure the output at the audio output terminal is 1 kHz -8 ± 3 dBs.
3. If out of spec, readjust the playback level and the bias current.

■ ADJUSTMENT OF THE IF CIRCUIT

Adjustment of the RF AGC

Measuring instrument	Oscilloscope Signal generator
Mode	EE
Input signal	Colour bar signal
Test point	TP1551 (GND) TP1552 (Video output)
Adjusting point	VR001 (AGC control)

1. Receive the colour bar signal (input field strength: 80 dB μ).
2. Observe the video output terminal waveform on the oscilloscope. Adjust VR001 (AGC control) in the IF pack until the noise disappears from the oscilloscope screen and the waveform nearly comes into sync.

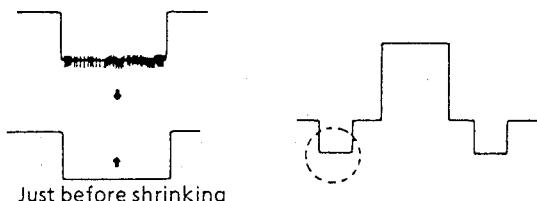

Figure 2-14.

Adjustment of the AFT

Measuring instrument	Oscilloscope Signal generator
Mode	EE
Input signal	PIF frequency uniwave Colour bar signal (70 dB μ)
Test point	TP1551 (GND) TP1552 (Video output)
Adjusting point	T002 (AFT coil)
Specification	_____

1. Receive the colour bar signal (input field strength: 70 dB μ).
2. Using the signal generator, feed the PIF frequency (38.9MHz) signal (sinewave) to the tuner IF output terminal.
3. Set the tuning switch to the VHF or UHF position. Keep the tuning button (+) or (-) depressed until the beating on the oscilloscope screen be minimum.
4. Set the tuning switch on the normal position. Adjust the T002 (AFT coil) so that beating on the oscilloscope screen be minimum.

REPLACEMENT OF TIMER IC5003 (E²PROM)

Servicing precautions

When the IC5003 E²PROM (VHIBR93C46A-1, VHIXRM9346A-1 or VHICAT93C46-1) in the timer unit has been replaced, make the following reprogramming.

Depending on models, the IC5003 E²PROM has been factory-adjusted for its memory function. It is therefore necessary to reprogram the memory function for the model in question. Note that the servo circuit requires readjustments for the slow and still modes.

Memory function reprogramming

1. Push the OPERATE button to turn the power on.
2. Press the TEST button on the timer PWB to get the unit in the TEST mode.
3. Push the CH SET button to get the unit in the CH SET mode.
4. Using the CHANNEL (+) AND (-) buttons, select the right function numbers from among I48-I63, which appear in the fluorescent display tube, referring to the E²PROM map. Push the DISPLAY button to pick up the functions (ON) and the CLEAR button to discard the functions (OFF).
- * When the DISPLAY button has been pushed (ON), the memory function No. starts flashing.
- * When the CLEAR button has been pushed (OFF), the memory function No. lights up.
5. Press the CH SET button to clear the CH SET mode.
6. Make the cathode of the timer D5004 and TJ203 on timer PWB short circuited, and the settings will be displayed in hexadecimal notation. Now you can see if the settings are correct.

Example:

"ON" and "OFF" are taken as "1" and "0" respectively. The numbers I48 to I63 are divided into four groups and each group's setting is displayed in hexadecimal notation.

I63	I62	I61	I60		I59	I58	I57	I56		I55	I54	I53	I52		I51	I50	I49	I48
0	1	0	0		0	0	1	0		0	0	0	0		0	0	0	0

4	2	0	0
---	---	---	---

"4200" appears in the fluorescent display tube.

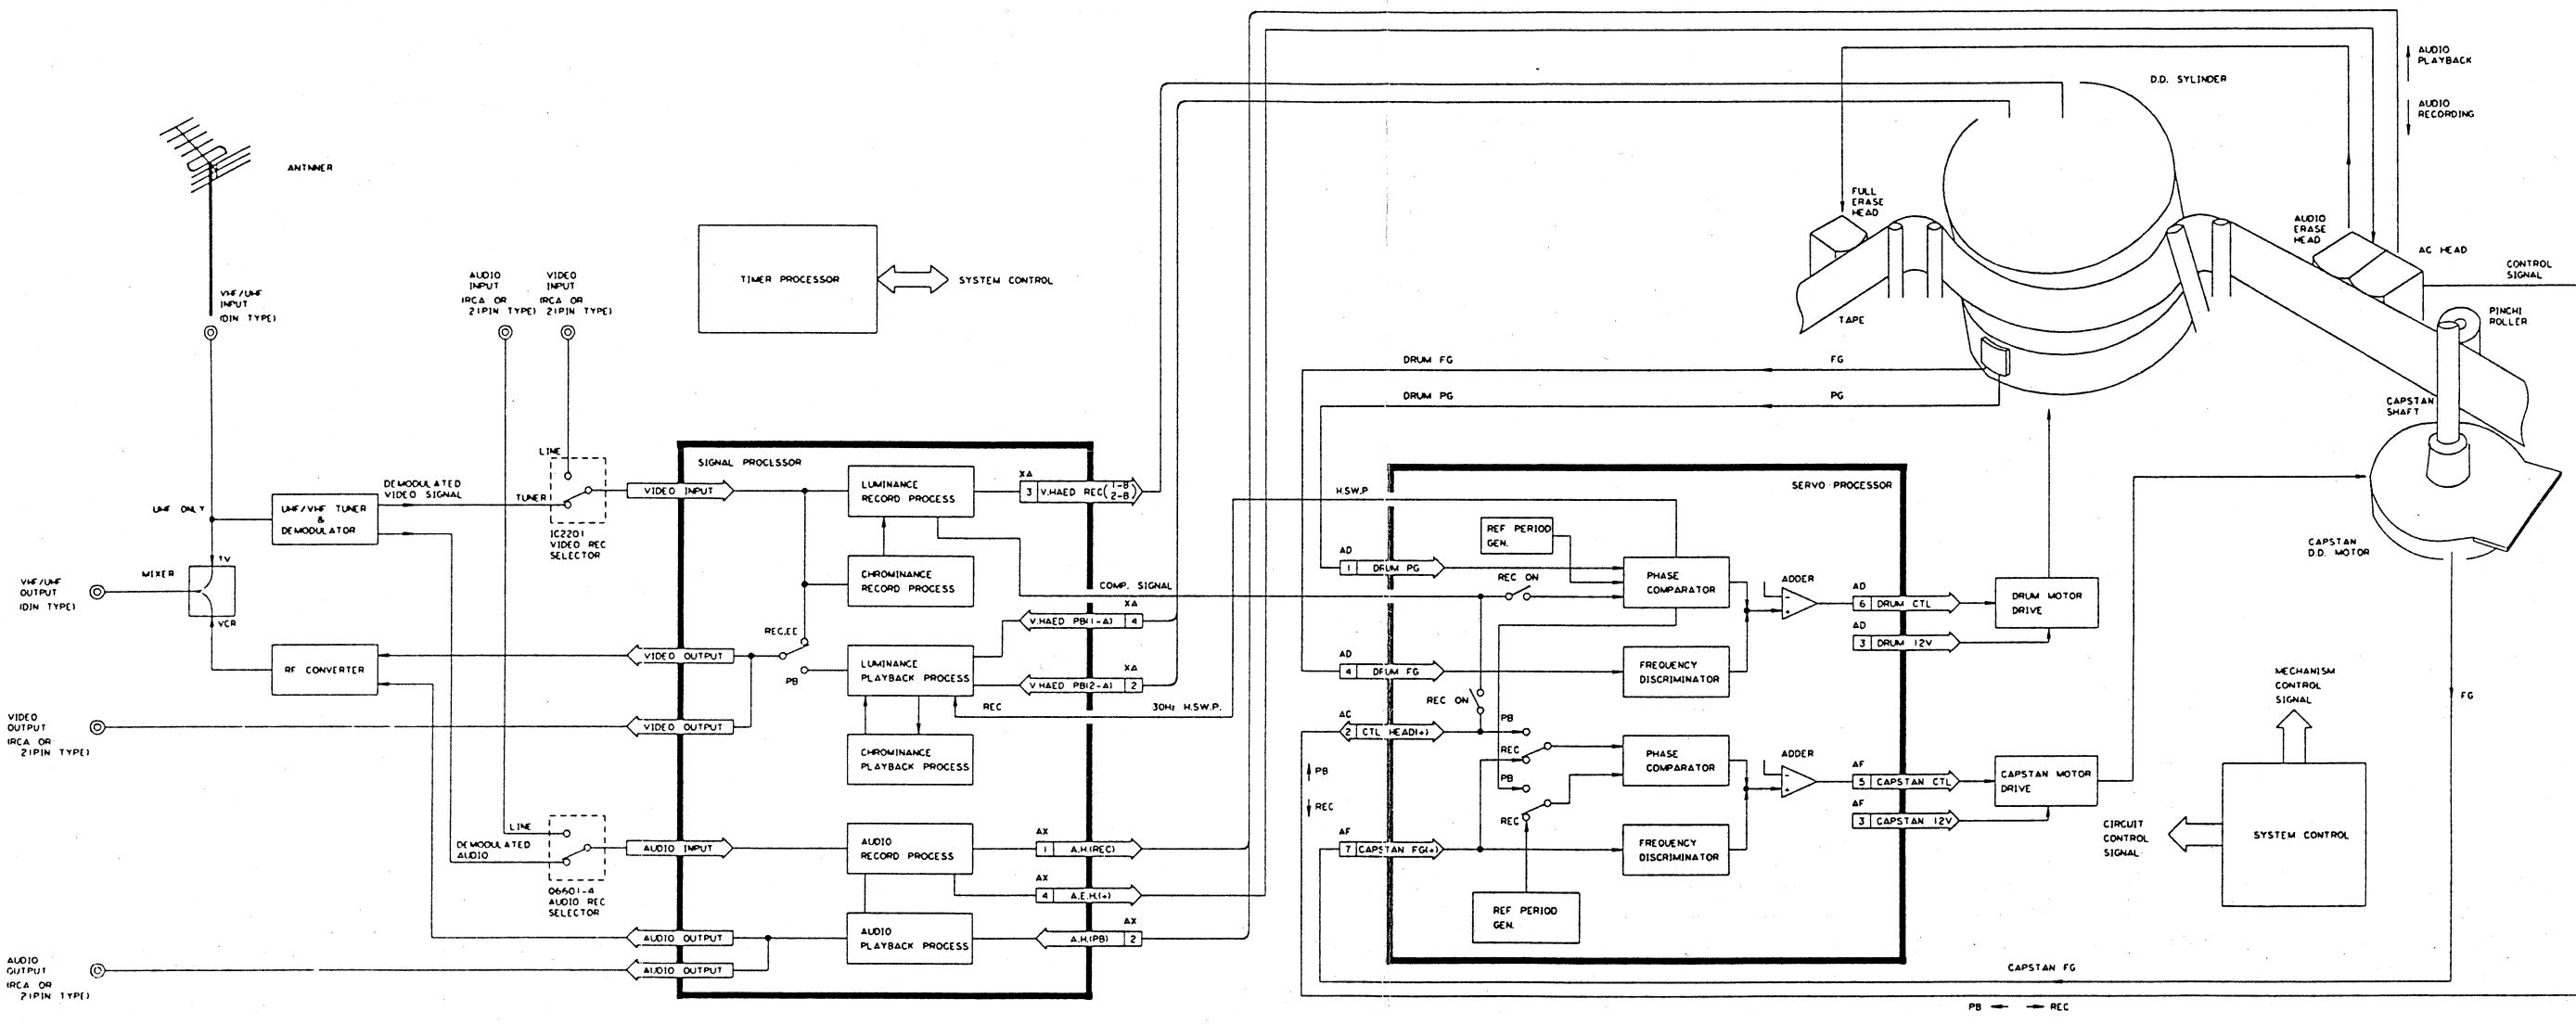

7. Finally push the ALC button to clear the TEST mode.

SCHEMATIC DIAGRAM

IMPORTANT SAFETY NOTICE:
BE SURE TO USE GENUINE PARTS FOR SECURING THE SAFETY AND RELIABILITY OF THE SET.
PARTS MARKED WITH "▲" AND PARTS SHADED (IN BLACK) ARE ESPECIALLY IMPORTANT FOR MAINTAINING THE SAFETY AND PROTECTING ABILITY OF THE SET.
BE SURE TO REPLACE THEM WITH PARTS OF SPECIFIED PART NUMBER.

SAFETY NOTES:
1. DISCONNECT THE AC PLUG FROM THE AC OUTLET BEFORE REPLACING PARTS.
2. SEMICONDUCTOR HEAT SINKS SHOULD BE REGARDED AS POTENTIAL SHOCK HAZARDS WHEN THE CASSIS IS OPERATING.

NOTES:
1. The unit of resistance "ohm" is omitted ($k = 1000 \text{ ohm}$, $M = 1 \text{ Meg ohm}$).
2. All resistors are $1/8$ watt, unless otherwise noted.
3. The unit of capacitance "F" is omitted ($\mu = \mu\text{F}$, $\rho = \mu\mu\text{F}$).
4. The values in parentheses are the ones in the PB mode; the values without parentheses are the ones in the REC mode.

VOLTAGE MEASUREMENT CONDITIONS:
1. DC voltages are measured between points indicated and chassis ground by VTVM, with AC 220V, 50/60Hz supplied to unit and all controls are set to normal viewing picture unless otherwise noted.
2. Voltages are measured with $10000\mu\text{V}$ B & W or colour signal.

WAVEFORM MEASUREMENT CONDITIONS:
 $10000\mu\text{V}$ 87.5 percent modulated colour bar signal is fed into tuner.

CAUTION:
This circuit diagram is original one. Therefore there may be a slight difference from yours.

REPLACEMENT PARTS LIST

PARTS REPLACEMENT

Many electrical and mechanical parts in video cassette recorder have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this manual; electrical components having such features are identified by Δ and shaded areas in the Replacement Parts Lists and Schematic Diagrams. The use of a substitute replacement part which does not have the same safety characteristics as the factory recommended replacement parts shown in this service manual may create shock, fire or other hazards.

"HOW TO ORDER REPLACEMENT PARTS"

To have your order filled promptly and correctly, please furnish the following informations.

FRONT PARTS

PRECAUTIONS ON FRONT PANEL SET-UP

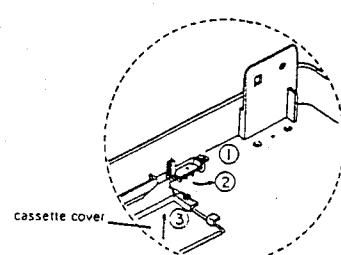

Before attaching the front panel in position make sure that the cassette cover open lever is in its right place (lowermost). If it is out of position, push it down with a finger.

keep the cassette cover about 45° open and make sure that the cassette cover open lever is between the front panel and the cassette cover. Now fix the front panel in place

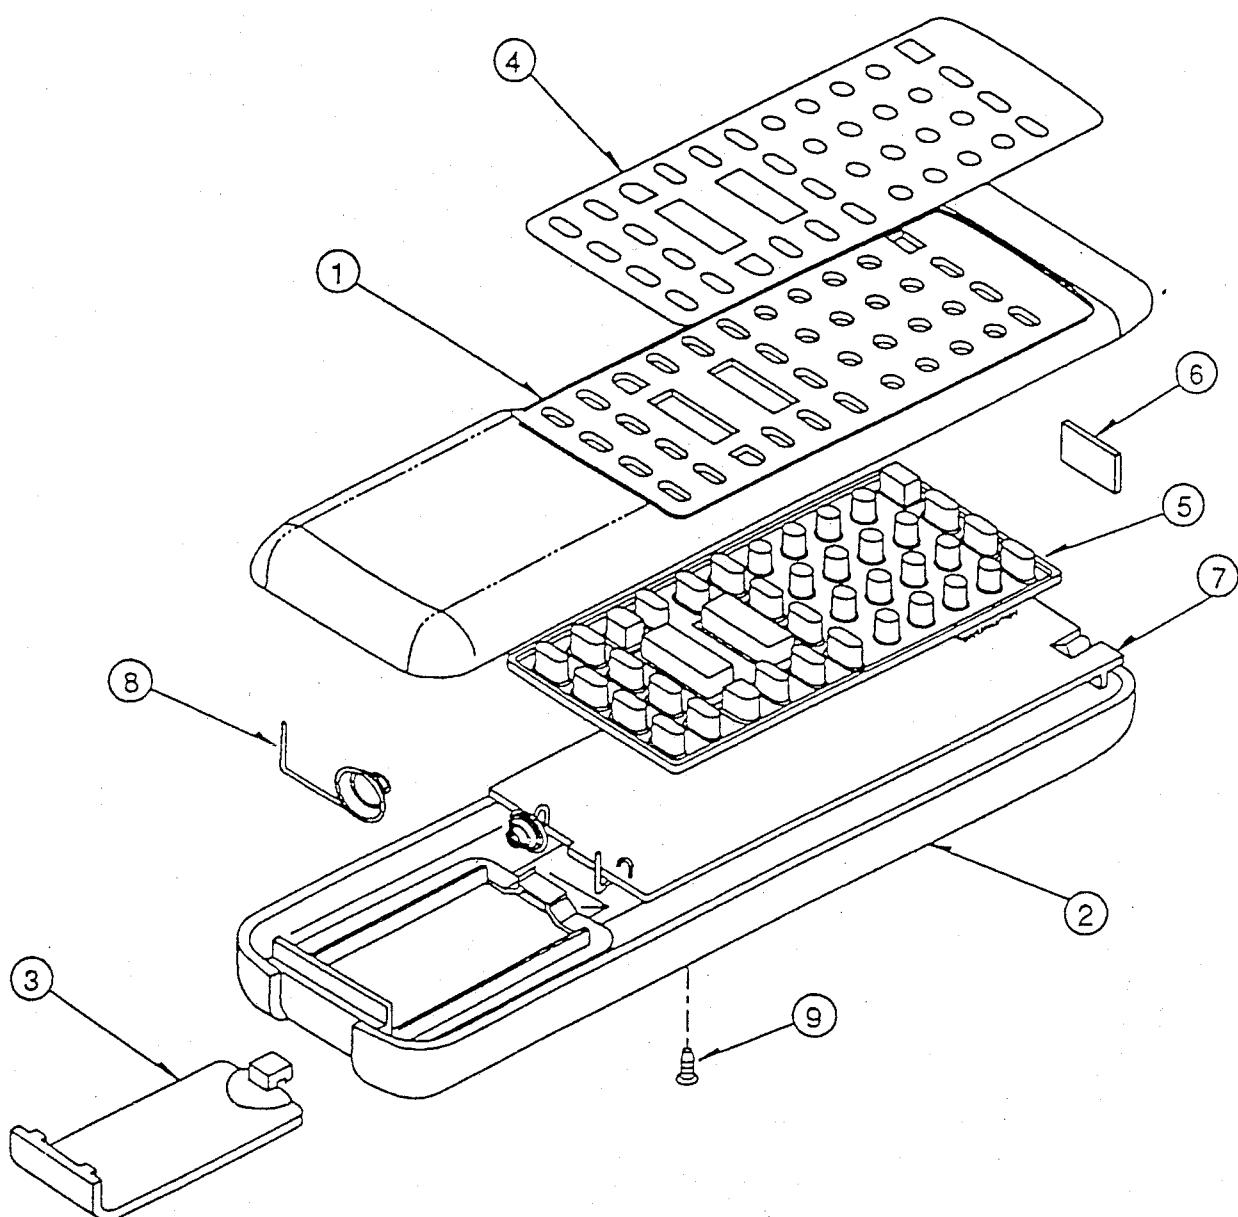

Do not mount the front panel with the cassette cover tilted too open. Otherwise the cassette cover might wrongly run on the cassette housing

Removing the cassette compartment cover

1. Loosen the screw ① and turn the fixing metal in the direction of the arrow ②.
2. Lift up the cassette compartment cover in the direction of arrow ③ and remove it from the front panel

SHARP

Technical Report

NO. : EEV-723

SUBJECT: Change of Parts

DATE : JAN.25,1994

FROM: Q.R.C.Center

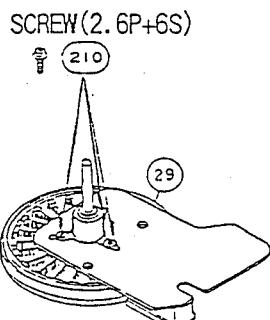

TV & VIDEO Systems

The following parts have been changed. Please note this information for your service.

MODELS	MODEL	SERIAL NO.	MODEL	SERIAL NO.	MODEL	SERIAL NO.	MODEL	SERIAL NO.
	REFER TO	NOTE						
Reason for change ①	1. To improve performance. 2. Change of material or dimension. 3. To meet approved specification.	4. To meet approved regulation. 5. Standardization. 6. Correction of printed matter.	7. Others.					
Interchangeability ②	A: Completely interchangeable B: Interchangeable from OLD to NEW. C: Interchangeable from NEW to OLD. D: Not interchangeable.		OLD ↔ NEW	OLD → NEW	OLD ← NEW	OLD X NEW		
REF. NO.	DESCRIPTION	OLD PARTS	NEW PARTS	(1)	(2)	EFFECTIVE FROM	PRICE CODE	AVAILABLE
29	CAPSTAN D.D. MOTOR	RMOTN2038GEZZ	RMOTN2048GEZZ	5	A	NOV./ 93	AZ	JAN/ 94
210	SCREW(2.6P+6S)	XHPSD26P06WS0	XHPSD26P06000	5	A		AA	

DETAIL OF CHANGE:

NOTE:

CAPSTAN D.D. MOTOR
